Introduction

Research assignments—resulting in final products such as term papers, essays, posters, multimedia projects, blog posts, 3-D models, etc.—are a common requirement in college courses, but they can also be a source of stress when you aren’t sure what to do. This guide is intended to decrease your stress and increase your comfort with such assignments.

Think of research as an exploration, with unexpected twists and turns.

TIP: Decoding Writing Assignments

Professors steeped only in the research traditions of their own discipline may
be unaware of how different conducting research can be in other disciplines. They may assume you already know what they expect for the research assignment they just gave you. But that may not be true at all: you may only know about how to conduct research in another discipline or, especially if you’ve been taking courses in multiple disciplines, be utterly confused because the expectations seem to change from course to course. This handout from the Ohio State University Writing Center can help you figure out what you need to do for your assignment.

Throughout this guide, we try to make more explicit some things less often talked about in class in order to “fill in the blanks.” The sections are ordered, more or less, as though you are conducting a research project while you’re reading them—from developing research questions through using sources in your writing. In between, you will learn how to figure out which sources to look for, how to find them, and how to evaluate them.

Under Additional Topics you’ll find information you may find helpful to help you navigate other questions—copyright, the fair use exception to copyright, and more.

**Conversation Balloons?**

The balloon graphics used throughout this guide are a reminder that you are entering the scholarly conversation when you do research and write about it. In Western culture, that conversation has been going on since the 1600s. Now it’s your turn to join in.
This guide features colorful conversation balloons to emphasize that you are entering the scholarly conversation when you do research and write about it.

1-Research Questions

The Purpose of Research Questions

Research questions are very important.

Both professional researchers and successful student researchers develop research questions. That’s because research questions are more than handy tools; they are essential to the research process.

By defining exactly what the researcher is trying to find out, these questions influence most of the rest of the steps taken to conduct the research. That’s true even if the research is not for academic purposes but for other areas of our lives.

For instance, if you’re seeking information about a health problem in order to learn whether you have anything to worry about, research questions will make it possible for you to more effectively decide whether to seek medical help—and how quickly.

Or, if you’re researching a potential employer, having developed and used research questions will mean you’re able to more confidently decide whether to apply for an internship or job there.
The confidence you’ll have when making such decisions will come from knowing that the information they’re based on was gathered by conscious thought rather than serendipity and whim.

—— Narrowing a Topic ——

For many students, having to start with a research question is the biggest difference between how they did research in high school and how they are required to carry out their college research projects. It’s a process of working from the outside in: you start with the world of all possible topics (or your assigned topic) and narrow down until you’ve focused your interest enough to be able to tell precisely what you want to find out instead of only what you want to “write about.”
**Process of Narrowing a Topic**

Visualize narrowing a topic as starting with all possible topics and choosing narrower and narrower subsets until you have a specific enough topic to form a research question.

**All Possible Topics** - You’ll need to narrow your topic in order to do research effectively. Without specific areas of focus, it will be hard to even know where to begin.

**Assigned Topics** - Ideas about a narrower topic can come from anywhere. Often, a narrower topic boils down to deciding what’s interesting to you. One way to get ideas is to read background information in a source like Wikipedia.

**Topic Narrowed by Initial Exploration** - It’s wise to do some more reading about that narrower topic to a) learn more about it and b) learn specialized terms used by professionals and scholars who study it.

**Topic Narrowed to Research Question(s)** - A research question defines exactly what you are trying to find out. It will influence most of the steps you take to conduct the research.
ACTIVITY: Which Topic Is Narrower?

Open activity in a web browser

Why Narrow a Topic?

Once you have a need for research—say, an assignment—you may need to prowl around a bit online to explore the topic and figure out what you actually want to find out and write about.

For instance, maybe your assignment is to develop a poster about “spring” for an introductory horticulture course. The instructor expects you to narrow that topic to something you are interested in and that is related to your class.

Another way to view a narrowed topic is as a sliver of the whole topic.

Ideas about a narrower topic can come from anywhere. In this case, a narrower topic boils down to deciding what’s interesting to you about “spring” that is related to what you’re learning in your horticulture class and small enough to manage in the time you have.

One way to get ideas would be to read about spring in Wikipedia, looking for
things that seem interesting and relevant to your class, and then letting one thing lead to another as you keep reading and thinking about likely possibilities that are more narrow than the enormous “spring” topic. (Be sure to pay attention to the references at the bottom of most Wikipedia pages and pursue any that look interesting. Your instructor is not likely to let you cite Wikipedia, but those references may be citable scholarly sources that you could eventually decide to use.)

Or, instead, if it is spring at the time you could start by just looking around, admire the blooming trees on campus, and decide you’d like your poster to be about bud development on your favorites, the crabapple trees.

--- Background Reading ---

It’s wise to do some more reading about that narrower topic once you have it. For one reason, you probably don’t know much about it yet. For another, such reading will help you learn the terms used by professionals and scholars who have studied your narrower topic. Those terms are certain to be helpful when you’re looking for sources later, so jot them down or otherwise remember them.

For instance, if you were going to do research about the treatment for humans with bird flu, this background reading would teach you that professionals and scholars usually use the term avian influenza instead of bird flu when they write about it. (Often, they also use H1N1 or H1N9 to identify the strain.) If you didn’t learn that, you would miss the kinds of sources you’ll eventually need for your assignment.

Most sources other than journal articles are good sources for this initial reading, including the New York Times or other mainline American news outlets, Wikipedia, encyclopedias for the discipline your topic is in (horticulture for the crabapple bud development topic, for instance), dictionaries for the discipline, and manuals, handbooks, blogs, and web pages that could be relevant.

This initial reading could cause you to narrow your topic further, which is fine because narrower topics lead to greater specificity for what you have to find out. After this upfront work, you’re ready to start developing the research question(s) you will try to answer for your assignment.
TIP: Keeping Track of Your Information

While you are in the discovery phase of your research you will come across a lot of sources and won’t know yet if they will prove useful in the long run. A handy type of software to help you keep track of all your findings that will also be extremely valuable when it comes to using the resources you end up needing is called citation management software. Three of these tools are available for free to OSU students, staff and faculty. Learn more about these tools and how to access them.

Fuel Your Inspiration

It’s worth remembering that reading, scanning, looking at, and listening to information resources is very useful during any step of the process to develop research questions. Doing so can jog our memories, give us details that will help us focus, and help us connect disparate information—all of which will help us come up with research questions that we find interesting.

Regular vs. Research Questions

Most of us look for information to answer questions every day, and we often act on the answers to those questions. Are research questions any different from most of the questions for which we seek information? Yes.

See how they’re different by looking over the examples of both kinds below and answering questions about them in the next activity. After you’ve considered the examples, see the bottom of the page for a summary of the differences.
EXAMPLES: Regular vs. Research Questions

Regular Question: What time is my movie showing at Lennox on Friday?

Research Question: How do “sleeper” films end up having outstanding attendance figures?

Regular Question: What can I do about my insomnia?

Research Question: How do flights more than 16 hours long affect the reflexes of commercial jet pilots?

Regular Question: How many children in the U.S. have allergies?

Research Question: How does his or her country of birth affect a child’s chances of developing asthma?

Regular Question: What year was metformin approved by the U.S. Food and Drug administration?

Research Question: Why are nanomedicines, such as doxorubicin, worth developing?

Regular Question: Could citizens register to vote at branches of the Columbus Public Library in 2012?

Research Question: How do public libraries in the United States support democracy?

Regular Question: What is the Whorfian Hypothesis?
<table>
<thead>
<tr>
<th>Research Question</th>
<th>Regular Question</th>
</tr>
</thead>
<tbody>
<tr>
<td>Why have linguists cared about the Whorfian hypothesis?</td>
<td>Where is the Apple, Inc. home office?</td>
</tr>
<tr>
<td>Why are Apple’s marketing efforts so successful?</td>
<td>What is Mers?</td>
</tr>
<tr>
<td>How could decision making about whether to declare a pandemic be improved?</td>
<td>Does MLA style recommend the use of generic male pronouns intended to refer to both males and females?</td>
</tr>
<tr>
<td>How do age, gender, IQ, and socioeconomic status affect whether students interpret generic male pronouns as referring to both males and females?</td>
<td></td>
</tr>
</tbody>
</table>

**ACTIVITY: Which Kind of Question**

[Open activity in a web browser.](#)

**Summary: Regular vs. Research Questions**

Research questions cannot be answered by a quick web search. Answering them involves using more critical thinking than answering regular questions because they seem more debatable. Research questions require more sources...
of information to answer and, consequently, take more time to answer. They, more often than regular questions, start with the word “How” or “Why.”

--- Influence of a Research Question ---

Whether you’re developing research questions for your personal life, your work for an employer, or for academic purposes, the process always forces you to figure out exactly:

- What you’re interested in finding out.
- What it’s feasible for you to find out (given your time, money, and access to information sources).
- How you can find it out, including what research methods will be necessary and what information sources will be relevant.
- What kind of claims you’ll be able to make or conclusions you’ll be able to draw about what you found out.

For academic purposes, you may have to develop research questions to carry out both large and small assignments. A smaller assignment may be to do research for a class discussion or to, say, write a blog post for a class; larger assignments may have you conduct research and then report it in a lab report, poster, term paper, or article.

For large projects, the research question (or questions) you develop will define or at least heavily influence:

- Your topic, in that research questions effectively narrow the topic you’ve first chosen or been assigned by your instructor.
- What, if any, hypotheses you test.
- Which information sources are relevant to your project.
- Which research methods are appropriate.

What claims you can make or conclusions you can come to as a result of your research, including what thesis statement you should write for a term paper or what results section you should write about the data you collected in your own science or social science study.
Your research question drives your hypothesis, research methods, sources, and your claims or conclusions.

**Influence on Thesis**

Within an essay, poster, or term paper, the thesis is the researcher’s answer to the research question(s). So as you develop research questions, you are effectively specifying what any thesis in your project will be about. While perhaps many research questions could have come from your original topic, your question states exactly which one(s) your thesis will be answering.

For example, a topic that starts out as “desert symbiosis” could eventually result in a research question that is “how does the diversity of bacteria in the gut of the Sonoran Desert termite contribute to the termite’s survival?” In turn, the researcher’s thesis will answer that particular research question instead of the numerous other questions that could have come from that topic.

It’s all part of a process that leads to greater and greater specificity.
TIP: Don’t Make These Mistakes

Sometimes students inexperienced at working with research questions confuse them with the search statements they will type into the search box of a search engine or database when looking for sources for their project. Or, they confuse research questions with the thesis statement they will write when they report their research.

ACTIVITY: From Topic to Thesis Statement

Open activity in a web browser.

Influence on Hypothesis

If you’re doing a study that predicts how variables are related, you’ll have to write at least one hypothesis. The research questions you write will contain the variables that will later appear in your hypothesis(es).

ACTIVITY: Guess the Question

Despite how strong their influence is on the rest of the researcher’s tasks, research questions don’t often appear in a report of the research. Nonetheless, you can usually figure out what the researcher’s research questions were by reading the title and some of the report. Take a look at this article “Getting to the Center of a Tootsie Roll Pop®” [OSU login required] and determine what the students’ research question was.

Influence on Resources

You can’t tell whether an information resource is relevant to your research until you know exactly what you’re trying to find out. Since it’s the research questions that define that, it’s they that divide all information sources into two groups:
those that are relevant to your research and those that are not—all based on whether each can help you find out what you want to find out and/or report the answer.

Influence on Research Methods

Your research questions will help you figure out what research methods you should use because the questions reflect what your research is intended to do. For instance, if your research question relates to describing a group, survey methods may work well. But they can’t answer cause-and-effect questions.

Influence on Claims or Conclusions

The research questions you write will reflect whether your research is intended to describe a group or situation, to explain or predict outcomes, or to demonstrate a cause and effect relationship(s) among variables. It’s those intentions and how well you carry out the study, including whether you used methods appropriate to the intentions, that will determine what claims or conclusions you can make as a result of your research.

ACTIVITY: Quick Check

Open activity in a web browser.

ANSWER TO ACTIVITY: Guess the Question

The answer to the “Guess the Question” Activity above is:

What was the students’ research question? How many licks does it take to get to the center of a Tootsie Roll Pop?
— Developing Your Research Question —

Because of all their influence, you might worry that research questions are very difficult to develop. Sometimes it can seem that way. But we’ll help you get the hang of it and, luckily, none of us has to come up with perfect ones right off. It’s more like doing a rough draft and then improving it. That’s why we talk about developing research questions instead of just writing them.

Steps for Developing a Research Question

The steps for developing a research question, listed below, help you organize your thoughts.

**Step 1:** Pick a topic (or consider the one assigned to you).

**Step 2:** Write a narrower/smaller topic that is related to the first.

**Step 3:** List some potential questions that could logically be asked in relation to the narrow topic.

**Step 4:** Pick the question that you are most interested in.

**Step 5:** Change that question you’re interested in so that it is more focused.

**MOVIE: Developing Research Questions**

As you view this short video on how to develop research questions, think about the steps. Which step do you think is easiest? Which do you think is hardest?

[View Movie] [View Text Version]

Practice

Once you know the order of the steps, only three skills are involved in developing a research question:
• Imagining narrower topics about a larger one,
• Thinking of questions that stem from a narrow topic, and
• Focusing questions to eliminate their vagueness.

Every time you use these skills, it’s important to evaluate what you have produced—that’s just part of the process of turning rough drafts into more finished products.

Three steps for developing a research question

**ACTIVITY: Developing a Research Question**

[Open activity in a web browser](#)

Maybe you have a topic in mind, but aren’t sure how to form a research questions around it. The trick is to think of a question related to your topic, but not answerable with a quick search. Also, try to be specific so that your research question can be fully answered in the final product for your research assignment.

**ACTIVITY: Thinking of Questions**

For each of the narrow topics below, think of a research question that is logically related to that topic. (Remember that good research questions often, but not always, start with “Why” or “How” because questions that begin that way usually require more analysis.)
Topics:

- U.S. investors’ attitudes about sustainability
- College students’ use of Snapchat
- The character Scout in *To Kill a Mockingbird*
- Nature-inspired nanotechnologies
- Marital therapy

After you think of each research question, evaluate it by asking whether it is:

- Logically related to the topic
- In question form
- Not answerable with a quick Google search
- Specific, not vague

Sometimes the first draft of a research question is still too broad, which can make your search for sources more challenging. Refining your question to remove vagueness or to target a specific aspect of the topic can help.

**ACTIVITY: Focusing Questions**

The first draft research questions below are not focused enough. Read them and identify at least one area of vagueness in each. Check your vagueness with what we identified. It’s great if you found more than we did because that can lead to research questions of greater specificity. See the bottom of the page for the answers.

First Drafts of Research Questions:

1. Why have most electric car company start-ups failed?
2. How do crabapple trees develop buds?
3. How has NASA helped America?
4. Why do many first-time elections soon after a country overthrows a dictator result in very conservative elected leaders?
5. How is music composed and performed mostly by African-Americans connected to African-American history?
ANSWER TO ACTIVITY: Focusing Questions

The answers to the “Focusing Questions” Activity above is:

**Question 1:** Why have most electric car company start-ups failed?  
Vagueness: Which companies are we talking about? Worldwide or in a particular country?

**Question 2:** How do crabapple trees develop buds?  
Vagueness: There are several kinds of crabapples. Should we talk only about one kind? Does it matter where the crabapple tree lives?

**Question 3:** How has NASA helped America?  
Vagueness: NASA has had many projects. Should we focus on one project they completed? Or projects during a particular time period?

**Question 4:** Why do many first-time elections soon after a country overthrows a dictator result in very conservative elected leaders?  
Vagueness: What time period are we talking about? Many dictators have been overthrown and many countries have been involved. Perhaps we should focus on one country or one dictator or one time period.

**Question 5:** How is music composed and performed mostly by African-Americans connected to African-American history?  
Vagueness: What kinds of music? Any particular performers and composers? When?
2-Types of Sources

Categorizing Sources

Understanding types of sources helps guide your search.

Once you have your research question, you’ll need information sources to answer it and meet the other information needs of your research project.

This section about categorizing sources will increase your sophistication about them and save you time in the long run because you’ll understand the big picture. That big picture will be useful as you plan your own sources for a specific research project, which we’ll help you with in the next section Sources and Information Needs.

You’ll usually have a lot of sources available to meet the information needs of your projects. In today’s complex information landscape, just about anything that contains information can be considered a source.

Here are a few examples:

- books and encyclopedias
- websites, web pages, and blogs
• magazine, journal, and newspaper articles
• research reports and conference papers
• field notes and diaries
• photographs, paintings, cartoons, and other art works
• TV and radio programs, podcasts, movies, and videos
• illuminated manuscripts and artifacts
• bones, minerals, and fossils
• preserved tissues and organs
• architectural plans and maps
• pamphlets and government documents
• music scores and recorded performances
• dance notation and theater set models

With so many sources available, the question usually is not whether sources exist for your project but which ones will best meet your information needs.

Being able to categorize a source helps you understand the kind of information it contains, which is a big clue to (1) whether might meet one or more of your information needs and (2) where to look for it and similar sources.

A source can be categorized by:

• Whether it contains quantitative or qualitative information or both
• Whether the source is objective (factual) or persuasive (opinion) and may be biased
• Whether the source is a scholarly, professional or popular publication
• Whether the material is a primary, secondary or tertiary source
• What format the source is in

As you may already be able to tell, sources can be in more than one category at the same time because the categories are not mutually exclusive.
--- Quantitative or Qualitative ---

One of the most obvious ways to categorize information is by whether it is quantitative or qualitative. Some sources contain either quantitative information or qualitative information, but sources often contain both.

Many people first think of information as something like what’s in a table or spreadsheet of numbers and words. But information can be conveyed in more ways than textually or numerically.

**Quantitative Information** - Involves a measurable quantity—numbers are used. Some examples are length, mass, temperature, and time. Quantitative information is often called data.

**Qualitative Information** - Involves a descriptive judgment using concepts (words instead of numbers). Gender, country name, animal species, and emotional state are examples of qualitative information.

Take a quick look at the Example table below. Another way we could display the table’s numerical information is in a graphic format—listing the students’ ages or GPAs on a bar chart, for example, rather than in a list of numbers. Or, all the information in the table could be displayed instead as a video of each student giving those details about themselves.
EXAMPLE: Data Table with Quantitative and Qualitative Data

</tbody>
</table>

This table illustrates that information can include a range of formats, including pictures.

Increasingly, other formats (such as images, sound, and video) may be used as information or used to convey information. Some examples:

- A video of someone watching scenes from horror movies, with information about their heart rate and blood pressure embedded in the video. Instead of a description of the person’s reactions to the scenes, you can see their reactions.
- A database of information about birds, which includes a sound file for each bird singing. Would you prefer a description of a bird’s song or an audio clip?
- A list of colors, which include an image of the actual color. Extremely helpful, especially when there are a lot of color names.
- A friend orally tells you that a new pizza place is 3 blocks away, charges $2 a slice, and that the pizza is delicious. This may never be recorded, but this may be very valuable information if you’re hungry!
- A map of Ohio with counties shaded different intensities of red according to median household income of inhabitants.
ACTIVITY: Quantitative vs. Qualitative

Check out these examples of quantitative vs. qualitative data. Now, think about yourself. What quantitative and qualitative data components might you use to describe yourself? See the bottom of the page for some possible answers.

ACTIVITY: Multiple Data Displays

Take a look at the Wikipedia article about UN Secretaries-General. Scroll down and view the table of people who served as Secretary-General. In what ways is information conveyed in ways other than text or numbers? See the bottom of the page for answers.

ANSWER TO ACTIVITY: Quantitative vs. Qualitative

The answer to the “Quantitative vs. Qualitative” Activity above is:

Quantitative: age, weight, GPA, income
Qualitative: race, gender, class (freshman, sophomore, etc.), major

Are there others?

ANSWER TO ACTIVITY: Multiple Data Displays

The answer to the “Multiple Data Displays” Activity above is:

• A photo of each secretary general
• The flag of their country of origin
• A world map with their country of origin shaded

Are there others?
An author’s purpose can influence the kind of information he or she choses to include. Depending on that purpose, the author may have chosen to include factual, analytical, and objective information. Or, instead, it may have suited his/her purpose to include information that was subjective and therefore less factual and analytical. The author’s reason for producing the source also determined whether he or she included more than one perspective or just his/her own.

Authors typically want to:

- Inform and educate
- Persuade
- Sell services or products or
- Entertain

---

**Combined Purposes**

Sometimes authors have a combination of purposes, as when a marketer decides he can sell more smart phones with an informative sales video that also entertains us. The same is true when a singer writes and performs a song that entertains us but that she intends to make available for sale. Other examples of authors having multiple purposes occur in most scholarly writing.

In those cases, authors certainly want to inform and educate their audiences. But they also want to persuade their audiences that what they are reporting and/or postulating is a true description of a situation, event, or phenomenon or a valid argument that their audience must take a particular action. In this blend of scholarly author’s purposes, the intent to educate and inform is considered to trump the intent to persuade.
Why Intent Matters

Authors’ intent usually matters in how useful their information can be to your research project, depending on which information need you are trying to meet. For instance, when you’re looking for sources that will help you actually decide your answer to your research question or evidence for your answer that you will share with your audience, you will want the author’s main purpose to have been to inform or educate his/her audience. That’s because, with that intent, he/she is likely to have used:

- Facts where possible
- Multiple perspectives instead of just his/her own
- Little subjective information
- Seemingly unbiased, objective language that cites where he/she got the information

The reason you want that kind of resource when trying to answer your research question or explaining that answer is that all of those characteristics will lend credibility to the argument you are making with your project. Both you and your audience will simply find it easier to believe—will have more confidence in the argument being made—when you include those types of sources.

Sources whose authors intend only to persuade others won’t meet your information need for an answer to your research question or evidence with which to convince your audience. That’s because they don’t always confine themselves to facts. Instead, they tell us their opinions without backing them up with evidence.

---

Fact vs. Opinion vs. Objective vs. Subjective

Need to brush up on the differences between fact, objective information, subjective information, and opinion?

**Fact** – Facts are useful to inform or make an argument.

Examples:

- The United States was established in 1776.
- The pH levels in acids are lower than pH levels in alkalines.
- Beethoven had a reputation as a virtuoso pianist.

**Opinion** – Opinions are useful to persuade or to make an argument.

Examples:
• That was a good movie.
• Strawberries taste better blueberries.
• George Clooney is the sexiest actor alive.
• The death penalty is wrong.
• Beethoven’s reputation as a virtuoso pianist is overrated.

**Objective** – Objective information reflects a research finding or multiple perspectives that are not biased.

Examples:

• “Several studies show that an active lifestyle reduces the risk of heart disease and diabetes.”
• “Studies from the Brown University Medical School show that twenty-somethings eat 25 percent more fast-food meals at this age than they did as teenagers.”

**Subjective** – Subjective information presents one person or organization’s perspective or interpretation. Subjective information can be meant to distort, or it can reflect educated and informed thinking. All opinions are subjective, but some are backed up with facts more than others.

Examples:

• “The simple truth is this: As human beings, we were meant to move.”
• “In their thirties, women should stock up on calcium to ensure strong, dense bones and to ward off osteoporosis later in life.”*

*In this quote, it’s mostly the “should” that makes it subjective. The objective version of the last quote would read: “Studies have shown that women who begin taking calcium in their 30s show stronger bone density and fewer repercussions of osteoporosis than women who did not take calcium at all.” But perhaps there are other data showing complications from taking calcium. That’s why drawing the conclusion that requires a “should” makes the statement subjective.

**ACTIVITY: Fact, Opinion, Objective, or Subjective?**

[Open activity in a web browser]
Another information category is publication mode, which has to do with whether the information is in its original form, a restatement or interpretation of original information, or something that summarizes original information.

Information may be a:

**Primary Source** - Information in its original form, which is not translated by anyone else and has not been published elsewhere. Such as:

- A play
- A novel
- Breaking news
- An advertisement
- An eyewitness account
- A painting
- A report about a scientific discovery

**Secondary Source** - Repackaged, restatement, or interpretation of primary information. Such as:

- A book about an historical event
- An article that critiques a novel, play or painting
- An article or web site that summarizes and synthesizes several eyewitness accounts for a new understanding of an event.

**Tertiary Source** - An index or something that condenses or summarizes information. Such as:

- Almanacs
- Guide books
- Survey articles
- Timelines
- User guides
- Encyclopedias

Primary sources include those that can answer your research questions and convince your audience that your answer is the correct one or at least a reasonable one. However, in our discussion of mode, it’s important to recognize that academic disciplines vary in what kinds of sources they consider primary.
sources. In other words, different disciplines accept different sources as those that can speak with authority—as those that can meet the information needs of answering your research question and convincing your audience your answer is correct or at least reasonable.

For instance, in the humanities, sciences, and social sciences, peer-reviewed scholarly journal articles are considered the most authoritative. But in the arts, it is the art itself—for instance, the painting, the choral performance, the hip-hop dancing done on the street—that speaks most convincingly. That doesn’t mean you could never use a video of a hip-hop dancer in a project for sociology or other social science. But if you did, it would not be to answer your research question or to convince your audience you have the right answer. It would be to meet another information need—for instance, to describe the situation surrounding your research question for your audience or convince them it is important.

If you haven’t been able to tell what sort of sources your instructor considers able to answer your research questions and convince your audience, do ask him or her. It’s an important question, and he or she will probably be impressed that you know enough to ask it.

ACTIVITY: Primary, Secondary, or Tertiary?

[Open activity in a web browser]
— Popular, Professional, & Scholarly —

We can also categorize information by the expertise of its intended audience. Considering the intended audience—how expert one has to be to understand the information—can indicate whether the source has sufficient credibility and thoroughness to meet your need.

There are varying degrees of expertise:

**Popular** – Popular newspaper and magazine articles (such as *The Washington Post*, the *New Yorker*, and *Rolling Stone*) are meant for a large general audience, generally affordable, easy to purchase or available for free. They are written by staff writers or reporters for the general public.

Additionally, they are:

- About news, opinions, background information, and entertainment.
- More attractive than journals, with catchy titles, attractive artwork, and many advertisements but no footnotes or references.
- Published by commercial publishers.
- Published after approval from an editor.
- For information on using news articles as sources (from newspapers in print and online, broadcast news outlets, news aggregators, news databases, news feeds, social media, blogs, and citizen journalism), see [News as a Source](#).

**Professional** – Professional magazine articles (such as *Plastic Surgical Nursing* and *Music Teacher*) are meant for people in a particular profession, often accessible through a professional organization. Staff writers or other professionals in the targeted field write these articles at a level and with the language to be understood by everyone in the profession.

Additionally, they are:

- About trends and news from the targeted field, book reviews, and case studies.
- Often less than 10 pages, some of which may contain footnotes and references.
• Usually published by professional associations and commercial publishers.
• Published after approval from an editor.

**Scholarly** – Scholarly journal articles (such as *Plant Science* and *Education and Child Psychology*) are meant for scholars, students, or the general public who want a deep understanding of a problem or issue. Researchers and scholars write these articles to present new knowledge and further understanding of their field of study.

Additionally, they are:

• Where findings of research projects, data and analytics, and case studies usually appear first.
• Often long (usually over 10 pages) and always include footnotes and references.
• Usually published by universities, professional associations, and commercial publishers.
• Published after approval by peer review or from the journal's editor.

See [Scholarly Articles as Sources](#) for more detail.

**TIP: Source Locator**

Our [Source Locator](#) can help you see where sources of every audience expertise level (popular, professional, and scholarly) are located.

**ACTIVITY: Popular, Professional, or Scholarly?**

Open activity in a web browser.

—— Publication Formats and the Information Cycle ——

We can also categorize sources by publication format. That’s because of the difference in timing and effort sources in each format require for their production.
Publication format gives a clue to how much effort and time were invested in production of a source.

Sources in particular formats simply cannot exist until there has been enough time for people to create them. The result is that the sources that are created toward the end of the information cycle may come to very different conclusions about the event than did those sources created early on.

Sometimes the information presented in the later formats is more valid and reliable than what is in those produced earlier.

A very good example is that conclusions about Columbine and the causes of that tragedy reached by books—which took years to complete after the event—were likely to be very different than the conclusions reached by news coverage created early on. For instance, many early reports concluded that the two teens responsible for the shooting had been shunned by their classmates and that it was the pain of their exclusion that had moved them to take revenge. Consequently, many K-12 schools nationwide took steps to try to ensure that all students felt included in their student bodies. But more time-consuming reportage concluded that the boys were not shunned (one had had a date for prom activities just days before) and that it was mental illness that made them kill their classmates.
MOVIE: Information Cycle

This video explains what kinds of information sources about an event can exist at any point in time during and after that event.

View Movie | View Text Version

ACTIVITY: Information Formats

You probably noticed that there are some information formats after events that the video does not include.

Think of ways you get information about events and list them here. Include where the information comes from (its format) and who is supplying the information. List anything you can think of.

Now compare your list to ours (see bottom of the page) to see if you thought of things we didn’t.

ACTIVITY: The Information Cycle

Open activity in a web browser.

A Closer Look at Common Formats

Books - Usually a substantial amount of information, published at one time, requiring great effort on the part of the author and a publisher.

Magazines/Journals - Published frequently, contain lots of articles, related to some general or specific professional research interest, edited, and selected.

Newspapers - Usually a daily publication of events of social, political and lifestyle interest.

Web sites - Digital item, consisting of multiple pages produced by someone with technical skills or the ability to pay someone with technical skills.
**Articles** – A distinct, short, written piece that might contain photos and is generally timely. Timeliness can mean that it’s because it’s something that is of interest to readers at the point of publication or that is something the writer is thinking about or researching at a given point of time.

**TIP: Evaluating Articles**

Evaluating whether articles are credible enough for your information need is similar to evaluating any other source. There’s more information on evaluating in [Evaluating Sources](#).

**Conference Papers** – Written form of a paper delivered at a professional or research-related conference. Authors are generally practicing professionals or scholars in the field.

**Blogs** – A frequently updated website that does not necessarily require extensive technical skills and can be published by virtually anyone for no cost to themselves other than the time they devote to content creation. Usually marked by postings that indicate the date when they were written.

**Documentaries** – A work, such as a film or television program, presenting political, social, or historical subject matter in a factual and informative manner and often consisting of actual news films or interviews accompanied by narration.

**Online Videos** – A short video produced by anybody, with a lot of money or a little money, about anything for the world to see. Common sites for these are YouTube and Vimeo.

**Podcasts** – A short audio or video produced by anybody, with a lot of money or a little money, about anything for the world to see. Common sites for these are YouTube and Vimeo.

**ACTIVITY: Best Format for the Purpose**

[Open activity in a web browser](#)
ANSWER TO ACTIVITY: Information Formats

The answer to the “Information Formats” Activity above is:

- Twitter
- Facebook – friends, media
- Google+
- Blogs - all sorts of people, expert and non-expert
- Breaking news apps on phone and iPad – news sources

—— Scholarly Articles as Sources ——

Why are articles in scholarly journals such valuable sources? It’s because they present new research on specific research questions, which makes them primary sources. And, when they are secondary sources, they are valuable because they review existing research in a field.

Peer-Reviewed Sources

The most-respected scholarly journals are peer-reviewed, which means that other experts in their field check out each article before it can be published. It’s their responsibility to help guarantee that new material is presented in the context of what is already known, that the methods the researcher used are the right ones, and that the articles contribute to the field.

Peer-reviewed articles are more likely to be credible. Peer-reviewed journal articles are the official scholarly record, which means that if it’s an important development in research, it will probably turn up in a journal article eventually.

Parts of a Scholarly Article

But, of course, the articles you use for your assignments must also be relevant to your research question—not just credible. Reading specific parts of an article can help save you time as you decide whether an article is relevant.
Finding Scholarly Articles

Most scholarly articles are housed in specialized databases. Libraries (public, school, or company) often provide access to scholarly databases by paying a subscription fee for patrons. For instance, OSU Libraries provide access to several hundred databases via its Research Databases List that are made available free to people affiliated with the University. You can search for a journal title or view a list of databases by subject in these databases. For more information, see Specialized Databases.

Databases that aren’t subject-specific are called general databases. Google Scholar is a free general scholarly database available to all who have access to the Internet. For more information, see our section on using Google Scholar.

TIP: Known Article Searching

What if you have a citation for an article you need and now have to find the actual text of the article? Follow these instructions to Access to a Known Journal Article.

—— News as a Source ——

News sources can provide insights that scholarly sources may not or that will take a long time to get into scholarly sources. For instance, news sources are excellent

CHOOSING AND USING SOURCES
for finding out people’s reactions, opinions, and prevailing attitudes around the time of an event.

**So whether news sources are good for your assignment depends on what your research question is.** (You’ll find other relevant information at Sources and Information Needs.)

News is a strange term, because even when the information is old, it’s still news. Some sources are great for breaking news, some are great for aggregated (or compiled) news, and others are great for historical news.

While news was transmitted for centuries only in newspapers, news is now transmitted in all formats: via radio, television, and the Internet, in addition to print. Even most newspapers have Internet sites today.

News must be brief because much of it gets reported only moments after an event happens. News reports occur early in the Information Cycle. See Publication Formats and the Information Cycle for more information.

**When Are News Sources Helpful?**

- You need breaking news or historical perspectives on a topic (what people were saying at the time).
- You need to learn more about a culture, place, or time period from its own sources.
- You want to keep up with what is going in the world today.

**When Are News Sources of Limited Use?**

- You need very detailed analysis by experts.
- You need sources that must be scholarly or modern views on a historical topic.

**ACTIVITY: Using News Effectively**

Open activity in a web browser.

**Mainline and Non-Mainline News Sources**

Mainline American news outlets stick with the tradition of trying to report the news as objectively as possibly. That doesn’t mean their reports are perfectly objective, but they are more objective than the non-mainline sources. As a result, mainline news sources are more credible than non-mainline sources. Some

News from non-mainline American news outlets is often mixed with opinions. One way they frequently exhibit bias is that they leave out pertinent facts. Some examples of non-mainline American news outlets: MSNBC, Fox News, Gawker, Reddit.

Types of News Sources

Press Services—News outlets (print, broadcast, and online) get a lot of their news from these services, such as Reuters or Associated Press (AP), that make it unnecessary for individual outlets to send their own reporters everywhere. Services are so broadly used that you may have to look at several news outlets to get a different take on an event or situation.

News aggregators—Aggregators don’t have reporters of their own but simply collect and transmit the news reported by others. Some sources pull news from a variety of places and allow for a single place to search for and view multiple stories. You can browse stories or search for a topic. Aggregators tend to have current, but not archival news. Google news and Yahoo News are examples.

Newspaper sites - Many print newspapers also have their own websites. They vary as to how much news they provide for free. Take a look at these examples.

- The Lantern, Ohio State University’s student newspaper
- The Columbus Dispatch
- USA Today
- The Boston Globe
- The Times of London
- China Daily, USA edition

News Databases - Search current, recent, and historical newspaper content in databases provided free by libraries. OSU Libraries offers 69 news databases to students, staff, and faculty. They include:

- LexisNexis Academic - contains news back to 1980 from newspapers, broadcast transcripts, wire services, blogs, and more.
- Proquest Historical Newspapers – contains older content from several major U.S. newspapers.
- allAfrica - contains more than a million articles from 100 African news sources, 1996-present.
- Lantern Online - contains the archive of all of OSU’s student newspaper issues, 1881-1997.
See the complete list of OSU Libraries’ newspaper databases.

**ACTIVITY: Choosing a Newspaper Database**

Look at the list of OSU Libraries’ newspaper databases available to OSU users. Which one would be a good place to find an article with an international left perspective on a topic?

**Broadcast News Sites** - Although broadcast news (from radio and television) is generally consumed in real time, such organizations also offer archives of news stories on their web sites. However, not all of their articles are provided by their own reporters: some originate from the press services, Reuters and AP. Here are some examples of broadcast new sites:

- ABC News
- BBC
- CNN
- NPR News
- NBC Learns (OSU only)

**ACTIVITY: One-Minute World News from the BBC**

Visit BBC’s Video area and watch their One-minute World News to get a quick update on the world’s major news stories.

**Social Media** - Most of the news outlets listed above contribute to Twitter and Facebook. It’s customary for a highly condensed announcement in this venue to lead you back to the news outlet’s website for more information. Social media has built an interesting link between news and activism. It has also provided an accessible place for ordinary citizens to report their own breaking news.

**Blogs** - Sometimes these are good sources for breaking news as well as commentary on current events and scholarship. Authors who write more objectively elsewhere can share more insights and opinions, more initial questions and findings about a study before they are ready to release definitive data and conclusions on their research.

**Citizen Journalism** - A growing number of sites cater to those members of the general public who want to report breaking news and submit their own photos and videos on a wide range of topics. The people who do this are often referred to as called citizen journalists.

Examples of such sources include CNN iReport, reddit, and Gawker. For more
details on the history and development of citizen journalism, including addressing some of the pros and cons, read Your Guide to Citizen Journalism.

**News Feeds** – You can get updates on specific topics, or a list of major headlines, regularly sent to you so you don’t have to visit sites or hunt for new content on a topic. Look for links that contain headings such as these to sign up for news feeds:

- RSS feeds
- News Feeds
- News Alerts
- Table of Contents Alerts

**MOVIE: What is an RSS Feed?**
[View video](#)

**ACTIVITY: RSS Feeds from Reuters**
Visit [Reuters News RSS Feeds](#) to see a list of general and very specific topic areas for which you can sign up for alerts. Is there a topic that interests you? Consider signing up for one (or more) that interests you.

**ANSWER TO ACTIVITY: Choosing a Newspaper Database**
If you look at the database descriptions, you will notice that the one for Alternative Press Index matches the need expressed in the question.

—— Data as Sources ——

Researchers find data (quantitative or qualitative information) to describe people, places, events, or situations, back up their claims, prove a hypothesis, or show
that one is not correct. In other words, they often use data to help answer their research questions.

Here are some hypotheses that would require data to prove:

- More women than men voted in the last presidential election in a majority of states.
- A certain drug shows promising results in the treatment of pancreatic cancer.
- Listening to certain genres of music lowers blood pressure.
- People of certain religious denominations are more likely to find a specific television program objectionable.
- The average weight of house cats in the United States has increased over the past 30 years.
- The average square footage of supermarkets in the United States has increased in the past 20 years.
- More tomatoes were consumed per person in the United Kingdom in 2015 than in 1962.

Researchers may find data on easily accessed webpages or buried in a database, book, or article that may or may not be on the open web.

(See Quantitative or Qualitative for some definitions and examples.)

**ACTIVITY: Example of Data**

Check out this very detailed data about frozen lasagna. Did you ever think this much data was available? Are there elements new to you? How might you use such data?

**MOVIE: Reinterpreting Little Red Riding Hood**

View video | View Text Version

**Obtaining Data**

There are two ways of obtaining data:
• Obtain data that already exists. That’s what this section will cover.
• Collect data yourself by making observations. This can include activities such as conducting surveys or interviews, directly recording measurements in a lab or the field, or even receiving electronic data recorded by computers/machines that gather the data. You will explore these activities in courses you take.

Data can be found all over the place. While you can, of course, use general web search engines to try to find data, there are several excellent tools for finding data on a wide range of topics. (See our Data Research Guide for information and links to those tools.)

- Hoover’s Online (OSU Only)
- International Monetary Fund Statistical Databases (OSU Only)
- Budget of the United States Government
- U.S. Bureau of Justice Statistics
- National Center for Education Statistics

Science Data:

- Census of Agriculture (OSU only)
- Daily Weather Maps NOAA
- GeoData.gov
- World Health Organization Statistical Information System
- Envirofacts

Finding Data in Articles, Books, Web Pages, and More

A lot of data can be found as part of another source – including web pages, books, and journals. In other words, the data do not stand alone as a distinct element, but rather are part of a larger work.

You could, of course, contact an author to request additional data. Researchers will discuss their data and its analysis – and sometimes provide some (or occasionally, all) of it. Some may link to a larger data set. A lot of data can be found as part of other a source - including web pages, books, and journals. In other words, the data do not stand alone as a distinct element, but rather are part of a larger work. Researchers will discuss their data and its analysis – and sometimes provide some (or occasionally, all) of it. Some may link to a larger data set. You could, of course, contact an author to request additional data.

Terms like statistics or data may or may not be useful search terms to use. Use these with caution, especially when searching library catalogs. (See information on the Library Catalog. More information on searching is at Precision Searching.)

Once you search for your topic, you may want to try skimming the items for tables, graphs, or charts. These items are summaries or illustrations of data
gathered by researchers. However, sometimes data and interpretations are solely in the body of the text.

Depending on your research question, you may need to gather data from multiple resources to get everything you need. You may also find data gathered on the same topic give conflicting results. This is the reality of research. When this happens, you can’t just ignore the differences—you’ll have to do your best to explain why the differences occurred.

**ACTIVITY: Where to Find Data**

[Open activity in a web browser](#)

---

**Proper Use of Data**

Once you have your data, you can examine them and make an interpretation. Sometimes, you can do so easily. But not always.

*What if…*

...*you had a lot of information?* Sometimes data can be very complicated and may include thousands (or millions...or billions...or more!) of data points. Suppose you only have a date and the high temperature for Columbus – but you have this for 20 years’ worth of days. Do you want to calculate the average highs for each month based upon 20 years’ worth of data by hand or even with a calculator?

...*you want to be able to prove a relationship?* Perhaps your theory is that social sciences students do better in a certain class than arts/humanities or science students. You may have a huge spreadsheet of data from 20 years’ worth of this course’s sections and would need to use statistical methods to see if a relationship between major and course grade exist.

You may find yourself using special software, such as Excel, SAS, and SPSS, in such situations.

Many people may have a tendency to look for data to prove their hypothesis or idea. However, you may find that the opposite happens: the data may actually disprove your hypothesis. You should never try to manipulate data so that it gives credence to your desired outcome. While it may not be the answer you wanted to find, it is the answer that exists. You may, of course, look for other sources of data – perhaps there are multiple sources of data for the same topic with differing
results. Inconclusive or conflicting findings do happen and can be the answer (even if it’s not the one you wanted!).

And, like with any other information resource, you should cite any data you use from a resource. If you found the data in a book, on a web page, or in an article, cite the data like you would those formats. If you used a database or downloaded a file, the citation style’s guide/manual should have directions for how to properly cite the data. (See How to Cite Sources.)

EXAMPLES: Citing Data

Data from a research database:

Data from a file found on the open Web:

3-Sources and Information Needs

It’s easier to find appropriate sources when you start with a plan.

This section and the section on Types of Sources work together. That’s because knowing the kinds of information in each category of sources will help you choose the right kind of information to meet each of your information needs. And some of those needs are very particular.

Information needs are why you need sources. Meeting those needs is what you’re going to do with sources as you complete your research project.

Here are those needs:

- To learn more background information.
- To answer your research question(s).
- To convince your audience that your answer is correct or, at least, the most reasonable answer.
- To describe the situation surrounding your research question for your audience and explain why it’s important.
• To report what others have said about your question, including any different answers to your research question.

**TIP:**

For another way to think about the work your sources do, see [Roles of Research Sources](#).

---

**Needs and Final Products**

The verbs in the list of information needs above tell you exactly how you’ll use sources to carry out your research and create your final product: to learn, answer, convince, describe, and report. But you won’t be doing any of that alone.

Your sources will give you information with which to reason. They’ll also give you direct quotes and information to summarize and paraphrase as you create your final product. In other words, your sources will support you every step of the way during your research project.

Background information may seldom appear directly in any final product. But meeting each of the other information needs will result in written sections of a term paper. For other final products, you’ll have the same needs and will use sources to meet them, but not all needs will result in a section of your final product.

**EXAMPLE: Final Products & Information Needs**

On a poster about your own original research, you aren’t likely to have room to describe the situation surrounding your research question and why the question is important or to report what others have said about your question. But that doesn’t mean you didn’t meet those needs and others as you carried out your research—unlike a term paper or journal article, the poster format in which you reported it just had more limited space.

More specifically, in order to justify doing the research to yourself and your professor, you will have started by meeting the information need to describe the situation and why it is important. (Your instructor may or may not have you
And in order to do research based on what has already been found out, you will have studied what others have already reported. Since every discipline requires its researchers to follow particular conventions when conducting and reporting research so as to produce results that are believable, you also will have tried to meet the need to convince your audience by your choice of what you report about your research after reading in sources how others have used the conventions for your discipline.

ACTIVITY: Sources and Information Needs

Open activity in a web browser.

Sources to Meet Needs

Because there are several categories of sources (see Types of Sources), the options you have to meet your information needs can seem complex.

Our best advice is to pay attention to when only primary and secondary sources are required to meet a need and to when only professional and scholarly sources will work. If your research paper is in the arts, also pay attention to when you can or must use popular sources.

These descriptions and summaries of when to use what kind of resource should help.
To Learn Background Information

When you first get a research assignment and perhaps for a considerable time afterward, you will almost always have to learn some background information as you develop your research question and explore how to answer it.

Sources from any category and from any subgroup within a category can meet students’ need to learn background information and understand a variety of perspectives—except journal articles, which are usually too specific to be background. From easy-to-understand to more complex sources, read and/or view those that advance your knowledge and understanding.

For instance, especially while you are getting started, secondary sources that synthesize an event or work of art and tertiary sources such as guidebooks can be a big help. Wikipedia is a good tertiary source of background information.

Sources you use for background information don’t have to be sources that you cite in your final report, although some may be.

Resources to Learn Background Information

- **Quantitative or Qualitative:** Either—whatever advances your knowledge
- **Fact or Opinion:** Any—whatever advances your knowledge
- **Scholarly, Professional or Popular:** Any—whatever advances your knowledge
- **Primary, Secondary or Tertiary:** Any—whatever advances your knowledge
- **Publication Format:** Any—whatever advances your knowledge

One important reason for finding background information is to learn the language that professionals and scholars have used when writing about your research question. (It will help you later, particularly when you’re searching for sources to answer your research question.)

To identify that language, you can always type the word glossary and then the discipline for which you’re doing your assignment in the search engine search box.
Here are two examples to try:

- Glossary neuroscience
- Glossary “social media marketing”

(Putting a phrase in quotes in most search boxes insures that the phrase will be searched rather than individual words.)

To Answer Your Research Question

You have to be much more picky with sources to meet this need because only certain choices can do the job. Whether you can use quantitative or qualitative data depends on what your research question itself calls for.

Only primary and secondary sources (from the category called publication mode) can be used to answer your research question and, in addition, those need to be professional and/or scholarly sources for most disciplines (humanities, social sciences, and sciences). But the arts often accept popular sources as primary or secondary sources to answer research questions. Also, the author’s purpose for most disciplines should be to educate and inform or, for the arts, to entertain and perhaps even to sell. (As you may remember, primary sources are those created at the same time as an event you are researching or that offer something original, such as an original performance or a journal article reporting original research. Secondary sources analyze or otherwise react to secondary sources. Because of the information cycle, the latest secondary sources are often the best because their creators’ have had time for better analysis and more information to incorporate.)

EXAMPLE: Quantitative or Qualitative Data

Suppose your research question is “How did the previous king of Saudi Arabia (King Abdullah) work to modernize his country?”

That question may lend itself to qualitative descriptive judgments—about what
are considered the components of modernization, including, for instance, what were his thoughts about the place of women in society.

But it may also be helped by some quantitative data, such as those that would let you compare the numbers of women attending higher education when Abdullah became king and those attending at the time of his death and whether manufacturing increased while he reigned.

So looking for sources that provide both quantitative and qualitative information (not necessarily in the same resource) is usually a good idea.

If it is not clear to you from the formats of sources you are assigned to read for your course, ask your professor which formats are acceptable to your discipline for answering your research question.

Resources to Answer Your Research Question

- **Quantitative or Qualitative:** Will be determined by the question itself
- **Fact or Opinion:** Professional and scholarly for most disciplines; the arts often use popular, as well
- **Scholarly, Professional or Popular:** Professional and scholarly for most disciplines; the arts often use popular, as well
- **Primary, Secondary or Tertiary:** Primary and secondary
- **Publication Format:** Those acceptable to your discipline
To Convince Your Audience

Convincing your audience is similar to convincing yourself and takes the same kinds of sources—as long as your audience is made up of people like you and your professor, which is often true in academic writing. That means using many of those sources you used to answer your research question.

When your audience isn’t very much like you and your professor, you can adjust your choice of sources to meet this need. Perhaps you will include more that are secondary sources rather than primary, some that are popular or professional rather than scholarly, and some whose author intent may not be to educate and inform.

Resources to Convince Your Audience

- **Quantitative or Qualitative Data**: Same as what you used to answer your research question if your audience is like you and your professor. (If you have a different audience, use what is convincing to them.)
- **Fact or Opinion**: Those with the purpose(s) you used to answer your research question if your audience is like you and your professor. (If you have a different audience, you may be better off including some sources intended to entertain or sell.)
- **Scholarly, Professional or Popular**: Those with the same expertise level as you used to answer the question if your audience is like you and your professor. (If you have a different audience, you may be better off including some popular.)
- **Publication Mode**: Primary and secondary if your audience is like you and your professor. If you have a different audience, you may be better off including more secondary sources than primary.
- **Publication Format**: Those acceptable your discipline, if your audience is like you and your professor.
To Describe the Situation

Choosing what kinds of sources you’ll need to meet this need is pretty simple—you should almost always use what’s going to be clear and compelling to your audience. Nonetheless, sources intended to educate and inform may play an out-sized role here.

But even then, they don’t have to educate and inform formally, which opens the door to using sources such as fiction or the other arts and formats that you might not use with some other information needs.

Resources to Describe the Situation

- **Quantitative or Qualitative:** Whatever you think will make the description most clear and compelling and your question important to your audience
- **Fact or Opinion:** Often to educate and inform, but sources don’t have to do that formally here so they can also be to entertain or sell
- **Scholarly, Professional or Popular:** Whatever you think will make the description most clear and compelling and your question important to your audience
- **Primary, Secondary or Tertiary:** Whatever you think will make the description most clear and compelling and your question important to your audience
- **Publication Format:** Whatever you think will make the description most clear and compelling and your question important to your audience
To Report What Others Have Said

The choices here about kinds of sources are easy: just use the same or similar sources that you used to answer your research question that you also think will be the most convincing to your audience.

Resources to Report What Others Have Said

- **Quantitative or Qualitative**: Those sources that you used to answer your research question that you think will be most convincing to your audience
- **Fact or Opinion**: Those sources that you used to answer your research question that you think will be most convincing to your audience
- **Scholarly, Professional or Popular**: Those sources that you used to answer your research question that you think will be most convincing to your audience
- **Primary, Secondary or Tertiary**: Those sources that you used to answer your research question that you think will be most convincing to your audience
- **Publication Format**: Those sources that you used to answer your research question that you think will be most convincing to your audience

**ACTIVITY: Meeting Your Information Needs**

[Open activity in a web browser](#)
Your Source Plan

Okay, so once you know what kinds of sources you need to meet your information needs, where should you look for them? Once more, thinking about categories can help.

Where sources are located is generally organized by audience expertise level—by whether they are popular, professional, or scholarly sources. Popular and professional are often grouped together. But scholarly sources tend to hang out by themselves. (That’s why searching Google Scholar locates more of them than just plain old Google, and an academic library has more scholarly sources than a public library.)

Before you start looking, try the Plan for Sources table below along with the suggestions made in this section to think through what sources you’ll need for your own research project. Having your Plan for Sources always at your side while you search for sources will guide where you look and what you’re willing to accept. It will help you keep track of whether you have found the right resources.
Thinking through the types of sources you need to meet your information needs helps you target your search. You can download the Plan for Sources table at http://go.osu.edu/planforsources.

You can download the table at [http://go.osu.edu/planforsources](http://go.osu.edu/planforsources), then fill it out with the help of our Source Locator. Using this table doesn’t mean you can’t change your mind if you later find another kind of resource that looks too good to pass up. But making a plan first will insure that you don’t just grab any resource you come across. The few minutes you take to complete the table will save you time later. And it’s nice to have a plan all in one place that you can put into action!
**EXAMPLE: Sample “Plan for Sources” Table**

<table>
<thead>
<tr>
<th>PLAN FOR SOURCES</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Course:</strong> ARTS &amp; SCIENCES 3200</td>
</tr>
</tbody>
</table>

**Research Question:** In what ways has the checklist movement affected surgery patient outcomes in U.S. hospitals?

<table>
<thead>
<tr>
<th>Information Needs</th>
<th>Kinds of Sources (Popular, Professional, or Scholarly) That Should Meet Each Need</th>
<th>Publication Formats Likely to be Helpful in Meeting Each Need</th>
<th>Where to Look</th>
</tr>
</thead>
<tbody>
<tr>
<td>To learn more background information</td>
<td>✓ Popular Professional</td>
<td>Any, including magazine articles, professional blogs, and association websites and publications</td>
<td>Google and Bing</td>
</tr>
<tr>
<td>To answer your research question and convince your audience</td>
<td>✓ Professional Scholarly</td>
<td>Books, research journal articles, conference papers</td>
<td>Library catalog, Library databases, Google Scholar</td>
</tr>
<tr>
<td>To report what others have said</td>
<td>✓ Professional Scholarly</td>
<td>Any, including professional blogs and association websites and publications, research journal articles, conference papers</td>
<td>Google and Bing, Library databases, Google Scholar</td>
</tr>
<tr>
<td>To describe the situation and why it’s important</td>
<td>✓ Popular Professional</td>
<td>Any, including magazine articles, professional blogs, and association websites and publications</td>
<td>Google and Bing</td>
</tr>
</tbody>
</table>

Completing the table puts all your planning in one place.

Even if you are not using our planning table, [Source Locator](#) can help you see where sources of every audience expertise level (popular, professional, and scholarly) are located. Check it out.
4-Precision Searching

--- Why Precision Searching? ---

Precise searches turn up more appropriate sources.

Effective searching takes precision. This section shows you how to perform several steps to make your searching more precise—you’ll turn up more sources that are useful to you and, more likely, sources that may be even crucial to your topic.

You’ve probably been searching in a more casual way for years and may wonder: Is going to the trouble of precision searching actually worth it?

Yes, definitely, for searches that are important to you! You’re in competition with many people who are working to be as skilled as they can be. So you should use as many of these steps as possible for course assignments and for information tasks you do on the job. With other tasks and searches, precision searching may be less important.
Search Strategy

This information on precision searching is based on how search tools such as Google and specialized databases operate. If you’ve been more casual in your searching practices, some of these steps may be new to you.

Starting with a research question helps you figure out precisely what you’re looking for. Next, you’ll need the most effective set of search terms - starting from main concepts and then identifying related terms. Those search terms need to be organized in the most effective way as search statements, which you actually type into a search box.

An important thing to remember is that searching is an iterative process: we try search statements, take a look at what we found and, if the results weren’t good enough, edit our search statements and search again—often multiple times. Most of the time, the first statements we try are not the best, even though Google or another search tool we’re using may give us many results.

It pays to search further for the sources that will help you the most. Be picky.

Here are the steps for an effective search.
Main Concepts

Identify the main concepts in your research question by selecting nouns important to the meaning of your question and leaving out words that don’t help the search, such as adjectives, adverbs, prepositions and, usually, verbs. Nouns that you would use to tag your research question so you could find it later are likely to be its main concepts.

Finding the main concepts in a research question is a lot like finding the main idea in an essay or story. Often the main idea is in the first paragraph, but not always. Sometimes it’s in a later paragraph or even in the conclusion. The same is true with research questions—the main concepts can be at the beginning, middle, or end. Stick to the nouns and only what’s necessary, not already implied. Don’t read in concepts that are not really there. Be alert to words that may have connotations other than the concept you are interested in. For instance, if you identify depression as a main idea, beware that the search engine won’t
automatically know whether you mean depression as a psychological state or as a condition of the economy or as a weather characteristic.

**EXAMPLE: How are birds affected by wind turbines?**

The main concepts are birds and wind turbines. Avoid terms like affect and effect as search terms, even when you’re looking for studies that report effects or effectiveness.

**EXAMPLE: What lesson plans are available for teaching fractions?**

The main concepts are lesson plans and fractions. Stick to what’s necessary. For instance, don’t include: children—nothing in the research question suggests the lesson plans are for children; teaching—teaching isn’t necessary because lesson plans imply teaching; available—available is not necessary.

Sometimes the questions themselves can seem complicated. Make sure you’ve stated the question as precisely as possible (as you learned in Research Questions). Then apply our advice for identifying main concepts as usual.

**ACTIVITY: Main Concepts**

Open activity in a web browser.

**EXAMPLE: Does the use of mobile technologies by teachers and students in the classroom distract or enhance the educational experience?**

Acceptable main concepts are teaching methods and mobile. Another possibility is mobile technologies and education.

Watch out for overly broad terms. For example, don’t include: educational experience—this choice misses mobile technology; classroom.
distractions—classroom distractions is also too broad because there are many distractions that have nothing to do with technology; technology or education—these terms are too broad since the question is focused on mobile technology.

ACTIVITY: More Main Concepts

Open activity in a web browser.

--- Related Terms ---

For each main concept, list alternative terms, including synonyms, singular and plural forms of the words, and words that have other associations with the main concept.

Sometimes synonyms, plurals, and singulars aren’t enough. So also consider associations with other words and concepts. For instance, it might help, when looking for information on the common cold, to include the term virus—because a type of virus causes the common cold.

Check to make sure that your terms are not too broad or too narrow for what you want. Figuring out what’s too broad or too narrow takes practice and may differ a bit with each search.

TIP: Try a Thesaurus

Have you considered using a thesaurus, such as thesaurus.com? Or adding a thesaurus to your browser search bar?

ACTIVITY: Finding Synonyms

When figuring out search terms, you can try your search terms in Visuwords <visuwords.com>, an online graphical dictionary, to see the connections
visually in a diagram reminiscent of a neural net. It can help you see connections between terms that it’s easy not to think of.

ACTIVITY: Alternate Terms

Open activity in a web browser.

Subject Headings Instead of Keywords

All the searches we have talked about so far have been keyword searches, usually used in search engines. But sometimes it pays to use tools—such as library catalogs and journal article databases—that have subject headings. Subject headings are standardized terms that are assigned by trained experts. (Some such tools also allow keyword searching.) See the section on Specialized Databases for more detail.

Search Statements

At this point in your search process, you are moving from merely identifying main concepts and similar search terms to developing more complicated search statements that can do more precise searching.

Use Quotation Marks for Phrases

Put quotation marks around any phrases among your terms so that the phrase is what’s searched for, rather than the separate words. “Common cold” instead of common cold is a good example. Without those quotation marks, just think how many sources Google or other search tools would waste their/your time on things that have nothing to do with our sniffles.
Putting a phrase in quotes returns results containing that phrase, and not the individual words.

Use Wildcard and Truncation Symbols to Broaden

Consider whether using wild card or truncating symbols would help find variations of a word(s). For instance, the wildcard symbol in wom?n finds both woman and women, and the truncating symbol in mathematic* finds mathematics, mathematically, mathematician, etc.

ACTIVITY: Wildcards and Truncation

Open activity in a web browser.

Consider AND, OR, NOT

You can often do more precise searching by combining search terms by using the
words AND, OR and NOT. These are known as Boolean Operators. Generally, using these operators narrows your search, making it more precise.

The Boolean operators AND, OR, and NOT exclude or include subsets of sources.

**AND** – If the main idea contains 2 or more ideas, you’ll want to use AND to combine them. To look for information about spiders as signs of climate change you’ll want to have both terms in the search and are performing an AND search. That’s what automatically happens in search engines such as Google and Bing unless you tell them to do something different by using OR or NOT.

**OR** – If the main idea has several synonyms, use OR to combine them. Most search tools search for all terms (AND) by default, so you need to use the term OR between terms to let it know you want to find any of the terms. In the previous example of Latino small business growth, we would want to also use the term Hispanic.

**NOT** – If the main idea has a common use you want to exclude, use NOT to exclude that word. For example if we were looking for information about illegal drug use we would want to exclude prescription drugs from the search results. This is commonly done with NOT or the use of the Minus (-) sign. (When using some search tools, use AND NOT before the term.)

**Using Parentheses with Multiple Operators**

When a search requires the use of more than one Boolean operator, use parentheses to group the terms with each Boolean. Doing that usually involves putting parentheses, quotation marks, and Boolean operators (AND, OR, NOT or their symbols) in specific places in the search statement. (The operators or symbols used can vary from search tool to search tool, but the concepts are the same.)

The resulting arrangements connect terms, remove terms, and organize search terms in complex ways, much like you might write mathematical statements.
Parenthesis are used with Boolean operators to combine terms for complex searches.

Being skillful at this task of envisioning the effects Boolean operators have on a search can help you troubleshoot your own arrangements when they aren’t turning up what you expected.

**EXAMPLE:** “United States” AND (immigration or emigration) Can you tell that the searcher wants to find information about the United States’ immigration or emigration?

The searcher will find more with this arrangement than would turn up if the arrangement had been “United States” immigration emigration. That’s because the latter arrangement without parentheses would find only information that was about both United States immigration and emigration, instead of either.

**EXAMPLE:** (cats OR dogs) AND (treatment OR therapy)

Can you tell that the searcher wants to find information about either treatment or therapy for either cats or dogs?

That’s a different search from what the searcher would have gotten if this arrangement had been used: cats dogs treatment therapy. Anything found with the later arrangement without parentheses would have had to be about both—not just either—therapy and treatment for both—not just either—cats and dogs. So the latter arrangement would have turned up fewer pieces of information.

**ACTIVITY: Search Analysis**

Open activity in a web browser.
Practice with Search

Take some time to practice searching precisely – start by identifying main concepts, then listing related terms (with the help of wildcard and truncation symbols), and finally constructing search statement.

ACTIVITY: Search Practice

This example focused on the research question “How does a person’s diet affect the risk for getting cancer?” Work through the three activities below.

Search Terms - [Open activity in a web browser]

Truncation - [Open activity in a web browser]

Search Statements - [Open activity in a web browser]

ACTIVITY: More Search Practice

This example focuses on the research question “What is the effect of gamma radiation on crops?” Work through the three activities below.

More Search Terms - [Open activity in a web browser]

More Truncation - [Open activity in a web browser]

More Search Statements - [Open activity in a web browser]
5-Search Tools

Library Catalog

The Ohio State University library catalog contains records for all the items owned or licensed by OSU Libraries and is searchable online. It also includes a circulation system that is used to check out materials. Students can use the system to have books and other materials quickly sent to their residence hall or for pick up at a library on main campus or any of the regional campus libraries. Items in the catalog include books, journals, documents, maps, movies, and recordings.

When to Use It

Use the library catalog to search for items that you can access with your Ohio State affiliation, to locate where those materials are stored, and to request them.

Note that OSU’s library catalog:

- Does not contain the full-text of any materials. However, some items may include a table of contents and a link to full-text digital content.
- Does not contain specific articles. The catalog can only tell you whether a periodical title is available.

How to Use It

To access the catalog, choose the Books and More tab on the OSU Libraries’ main page at http://library.osu.edu. From there, you can do a search or click on More Options to get to get access to other search options, including an advanced search.
Search Types

The catalog allows searching by author, title, journal title, subject, and keyword as well as specialty numbers such as the Library of Congress call number and ISBN (International Standard Book Number). There is also an option for advanced search.

Additional tips:

- Keyword searches are the broadest search, as they span all information in an item record. (The search tips in Precision Searching, are based on using keywords.)
- Subjects are a very specific set of terms that are helpful for precision searches. Often, the easiest way to find subject terms is to do a keyword search and look at the subject terms for those that are good matches for your topic.
- The Advanced Search screen allows a few additional search capabilities, such as multiple search fields to narrow the scope of a search term. You can also limit by year range, language, location, or format.

—— WorldCat@OSU ——

WorldCat@OSU searches the holdings of libraries from all over the world (including Ohio State University Libraries and OhioLINK libraries), as well as content from thousands of journals and millions of electronic books and web-accessible documents.
When to Use It

WorldCat@OSU is good for quick searches on a topic, as a starting point, and for interdisciplinary topics. However, despite its size, it is not all-inclusive. It does not search all journals and databases, and full-text searching is limited.

How to Use It

To access WorldCat@OSU, choose the Search All tab on the OSU Libraries’ main page at http://library.osu.edu. (Off-campus users will be asked to sign in with an OSU username and password or proceed as a guest for fewer options.)

Narrowing Searches

- To specific databases – From the Search All tab, click the Advanced Search link to get access to other search options, including selecting specific databases.
- To articles – Under the Articles tab on the OSU Libraries home page, you will be using WorldCat@OSU to search only for articles.
- To books/ebooks, journal titles, and audiovisual items – Under the Books and More tab on the OSU Libraries home page, you’ll see an option for searching WorldCat@OSU.

——Google Scholar——

Google Scholar is a tool for finding books and journal articles that you might normally get from a library. Where possible, it provides links to online versions and to library copies to help you locate an item.
**When to Use It**

Use Google Scholar to find scholarly articles and books, verify citations, and explore related resources. When books are available through Google Books, some of their content may be available online.

---

**How to Use It**

Go to Google Scholar ([http://scholar.google.com](http://scholar.google.com)).

**MOVIE: Using Google Scholar**

Watch this tutorial on the basics of Google Scholar use.

[View video](#)

Note: Setting your school in Scholar Preferences will help you make direct connections to online sources provided by your library. If you want to locate sources in many different libraries, add WorldCat in addition to your library. (Remember to save your preferences.)

In your search results, you can connect to an online version if there is a linked option following the item’s title. (If you’ve added Ohio State under preferences, a Find It link is shown to provide a link to full-text or to help you request the item if it’s not available online. If you’ve added WorldCat to your preferences, the Library Search link displays the WorldCat record, which shows all of the libraries that own the item. If there are multiple references to the same item, Google Scholar groups them. You can click the versions link following a title to see a list of all versions.)

**Additional Tips**

- Authors related to your search are shown in the left column to help you find related content. The Recent Articles link allows you to limit your search results by date.
- Advanced Scholar Search provides additional search fields such as author, publication, and date, as well as phrase matching and word exclusion. You can also limit by subject area.
A specialized database—often called a research or library database—allows targeted searching on one or more specific subject areas (i.e., engineering, medicine, Latin American history, etc.), for a specific format (i.e., books, articles, conference proceedings, video, images), or for a specific date range during which the information was published.

There are several types of specialized databases, including:

- Bibliographic – details about published works
- Full-text – details plus the complete text of the items
- Multimedia – various types of media, such as images, audio clips, or video excerpts
- Directory – brief, factual information
- Numeric – data sources
- Product – model numbers, descriptions, etc.
- Mixed – a combination of other types, such as multimedia and full-text

**ACTIVITY: Database Types**

Open activity in a web browser.

**When to Use Specialized Databases**

Search specialized databases to uncover scholarly information that is not available through a regular web search. Specialized databases are especially helpful if you require a specific format or up-to-date, scholarly information on a specific topic.

Many databases are available both in a free version and in a subscription version. Your affiliation with a subscribing library grants you access to member-based services. For example, using PubMed via OSU Libraries enables a Find It link to help you request an item.
**TIP: Free vs. Subscription?**

In some cases, the data available in free and subscription versions are the same, but the subscription version provides some sort of added value or enhancement for searching or viewing items.

**Database Scope**

Information about the specific subject range, format, or date range a particular specialized database covers is called its scope. A specialized database may be narrow or broad in scope, depending on whether it, for instance, contains materials on one or many subject areas.

If you are using a database licensed by OSU Libraries and have clicked the title in the list of databases, you will see scope information at the bottom of the same page that says “Click on the following to go to the resource.”
This example shows the scope page for an OSU-licensed database. View the live example.

Once you are aware of a database’s scope, you’ll be able to decide whether the database is likely to have what you want (for instance, journal articles as opposed to conference proceedings). Reading about the scope can save you time you would have otherwise wasted searching in databases that do not contain what you need.

**ACTIVITY: Determining Subject Scope**

Open activity in a web browser.
ACTIVITY: Years of Coverage

In addition to subject scope, database descriptions should include years of coverage. Visit Ohio State’s Research Databases List to search for the databases listed below. Which database contains the oldest information? Which covers the fewest years?

- Evidence Based Medicine Reviews
- MathSciNet
- GeoRef

How to Use Them

See Ohio State’s research database list.

Use of each database varies somewhat. Standard search steps for choosing keywords (as described in Precision Searching) apply. However, research databases may also use subject headings to assist with precision searching.

EXAMPLE: Academic Search Complete

Academic Search Complete (OSU only) is a general article database available through most academic and large public libraries that is often recommended for undergraduate research projects.

MOVIE: Academic Search Complete Database in 3 Minutes

View video

Records and Fields

The information researchers usually see first after searching a database is the “records” for items contained in the database that also match what was asked for by the search.
Each record describes an item that can be retrieved and gives you enough information so that, hopefully, you can decide whether it should meet your information need. The descriptions are in categories that provide different types of information about the item. These categories are called “fields.” Some fields may be empty of information for some items, and the fields that are available depend on the type of database.

**EXAMPLE: Database Fields**

A bibliographic database describes items such as articles, books, conference papers, etc. Common fields found in bibliographic database records are:

- Author
- Title (of book, article, etc.)
- Source title (journal title, conference name, etc.)
- Date
- Volume/issue
- Pages
- Abstract
- Descriptive or subject terms

In contrast, a product database record might contain the following fields:

- Product Name
- Product Code number
- Color
- Price
- Amount in Stock

**Keyword Searching**

Although keyword search principles apply, you may want to use fewer search terms since the optimal number of terms is related to database size. Google and Bing work best with several terms since they index billions of web pages and additional terms help narrow the results; each scholarly database indexes a fraction of that number so you are less likely to be overwhelmed by results even with one or two keywords.

Phrase searching (putting multiple words in quotes so Google or Bing will know to search them as a phrase) is also less helpful in specialized databases because
they are smaller and more focused. Databases are better searched by beginning with only a few general search terms, reviewing your results and, if necessary, limiting them in some logical way. (See Limiting Your Search below.)

**ACTIVITY: Compare Them!**

Compare a search for items containing both phrases “United States” and “female serial killers” in the article database Academic Search Complete (OSU only) and in the web search engine Bing. Notice how searching too narrowly (searching for phrases) affects results in the specialized database. How could you revise the specialized database search to get more results?

**Limiting Your Search**

Many databases allow you to choose which areas (also called fields) of items to search for your search term(s), based on what you think will turn up documents that are most helpful.

For instance, you may think the items most likely to be helpful to you are those whose titles contain your search term(s). In that case, your search would not show you any records for items whose titles do not have your term(s). Or maybe you would want to see only records for items whose abstracts contain the term(s).

When this feature is available, directing your search to particular parts of items, you are said to be able to “limit” your search. You are limiting your search to only item parts that you think will have the biggest pay-off at distinguishing helpful items from unhelpful items.

Searching fields such as title, abstracts, and subject classification often gives helpful items.

**TIP: Full-Text Searches**

Some databases allow for full-text searching, but this option includes results where a search term appears only once in dozens or more pages. Searching fields such as title, abstracts, and subject classification will often give more relevant items.
Subject Heading Searching

One precision searching technique may be helpful in databases that allow it, and that’s subject heading searching. Subject heading searching can be much more precise than keyword searching, as you are sure to retrieve only your intended concept.

Subject searching is helpful in situations such as:

- There are multiple terms for the same topic you’re interested in (example: cats and felines).
- There are multiple meanings for the same word (example: cookie the food and cookie the computer term).
- There are terms used by professionals and terms used by the general public, including slang or shortened terms (example: flu and influenza).

Here’s how it works:

Database creators work with a defined list of subject headings, which is sometimes called a controlled vocabulary. That means the creators have defined which subject terms are acceptable and assigned only those words to the items it contains. The resulting list of terms is often referred to as a thesaurus. When done thoroughly, a thesaurus will not only list acceptable subject headings, but will also indicate related terms, broader terms and narrower terms for a concept.

**TIP: Finding Useful Subject Headings**

Try this strategy to find useful subject headings. Remember it by thinking of the letters KISS:

- **Keyword-search** your topic.
- **Identify** a relevant item from the results.
- **Select** subject terms relevant to your topic from that item’s subject heading.
- **Search** using these subject terms. (Some resources will allow you to simply click on those subject terms to perform a search. Others may require you to copy/paste a subject term[s] into a search and choose a subject field.)
ACTIVITY: Searching Specialized Databases

Open activity in a web browser.

ANSWER TO ACTIVITY: Years of Coverage

The answer to the “Years of Coverage” Activity above is:

- The database containing the oldest material is GeoRef, which goes back to 1785.
- The database covering the fewest years is Evidence Based Medicine Reviews, which goes back to 1991.

--- Web Search Engines ---

Web search engines use special software programs (called robots, spiders, or crawlers) to find Web pages and list (or index) all words within each one to make searching large quantities of page faster. Indexes capture the largest amount of information on the Web, but no index lists everything on the Internet.

Commonly used search engines include Google (https://www.google.com) and Bing (http://www.bing.com).

In addition to search engines, there are also:

- Specialized web search engines – A tool that has a specialty, usually either a subject or format focus. It ignores the rest of the information on the web. Examples include science.gov (http://www.science.gov/) and TinEye Reverse Image Search (https://www.tineye.com).
- Metasearch engines – Tools that search multiple web search engines and gives you results from all of them. Some of these return the best results from the search engines they search. Examples include Dogpile (http://www.dogpile.com) and WebCrawler (https://www.webcrawler.com).
• Web directories - Tools created by editors or trained researchers who
categorize or classify web sites by subject. Directories are more selective
than search engines. An examples includes Ipl2 (http://www.ipl.org).

When to Use Them

Web Search Engines and related web search tools are helpful for locating
background information, news (especially if it’s recent), and public opinion.

However, scholarly information is often not available through a regular web
search. If you do find scholarly information through a web search engine,
especially if you are off campus, you may be asked for payment to access it. Ohio
State Libraries can usually get you what you need without additional payment.

Remember to follow the advice in Source Evaluation to determine whether
information you locate online is suitable for your information needs.

How to Use Them

See links above. Use of each tool varies. If a search engine has an advanced
search, it may include options such as specifying format, language, domain, or
date range.

—— Tips for Common Search Tools ——

Academic Search Complete

• AND: default (alternatively: term AND term)
• OR: term OR term
• NOT: term NOT term
• Exact Phrase: “exact phrase search”
• Grouping: term AND (term OR term)

Bing

• AND: default
• **OR:** term OR term
• **NOT:** term NOT term
• **Exact Phrase:** “exact phrase search”
• **Grouping:** Not available

• **OR:** term OR term
• **NOT:** term NOT term
• **Exact Phrase:** “exact phrase search”
• **Grouping:** term AND (term OR term)

---

**OSU Library Catalog**

• **AND:** term AND term
• **OR:** term OR term
• **NOT:** term NOT term
• **Exact Phrase:** “exact phrase search”
• **Grouping:** term AND (term OR term)
Source evaluation usually takes place in two stages:

- First you try to determine which sources are credible and relevant to your assignment.
- Later, you try to decide which of those relevant and credible sources contain information that you actually want to quote, paraphrase, or summarize. This requires a closer reading, a finer examination of the source.

This lesson teaches the first kind of evaluation—how to weed out sources that are irrelevant and not credible and how to “weed in” those that are relevant enough and credible enough.

Because there often aren’t clear-cut answers when you evaluate sources, **most of the time you have to make inferences-educated guesses from available clues**—about whether to use information from the website or other source.
The clues are factors you should consider when trying to decide whether a source is:

- A relevant source of information – Is it truly about your topic and from the right time period?
- A credible source of information – Is there sufficient reason to believe it’s accurate?

---

**Good Enough for Your Purpose?**

Not every resource you turn up in your searches will be credible and relevant enough to meet your information needs. So, how will you ferret out the very best to use?

Sources should always be evaluated relative to your purpose—why you’re looking for information.

Your information needs will dictate:

- What kind of information will help.
- How serious you consider the consequences of making a mistake by using information that turns out to be inaccurate. When the consequences aren’t very serious, it’s easier to decide a site and its information are good enough for your purpose. Of course, there’s a lot to be said for always having accurate information, regardless.
- How hard you’re willing to work to get the credible, timely information that suits your purpose. (What you’re learning here will make it easier.)

Thus, your standards for relevance and credibility may vary, depending on whether you need, say:

- Information about a personal health problem
- An image you can use on a poster
- Evidence to win a bet with a rival in the dorm
- Dates and times a movie is showing locally
- A game to have fun with
- Evidence for your argument in a term paper

For your research assignments, the consequences may be great if you use information that is not relevant or not credible.
What Do You Already Know?

You must already be continually evaluating information sources in your personal life. Think for a minute about what information you have acted on today (where to go, what to do, what to eat, whether to read this page, etc.). What helped you decide whether the information was relevant and credible?

Which of the factors below do you consider to be criteria for evaluating sources of information?

- My instructor recommended the source
- Other sources I like are linked to it
- I know who runs the site
- Its information makes sense with what I already know
- I recognize the truth when I see it
- The site fits with how I was raised
- All my friends accept its information / A friend recommended the website
- I’ve used similar sources before / I’ve used the source before and nothing bad happened
- The website is easy to use / It has all the information I need so I don’t have to go to a lot of sites
- What kind of site it is / The website looks professional

You probably chose at least several factors that we would agree with. Take a look at what we recommend on the next page.

ACTIVITY: Quick Check

Open activity in a web browser.

—— Evaluating Websites ——

What are the clues for inferring a source’s relevancy and credibility? Let’s start with evaluating websites, since we all do so much of our research online. But we’ll also include where to find clues relevant to sources in other formats when they differ from what’s good to use with websites. Looking at specific places in the sources will mean you don’t have to read all of every resource to determine its worth to you.

Note: Since we all do so much of our research online, this lesson emphasizes how to evaluate websites as sources. But along the way, we’ll interject information
about evaluating sources in other formats, too, when it differs from what’s used with websites.

What Used to Help

It used to be easier to draw conclusions about an information source’s credibility, depending on whether it was a print source or a web source. We knew we had to be more careful about information on the web—simply because all the filters that promoted accuracy involved in the print publishing process were absent from most web publishing. After all, it takes very little money, skill, and responsible intent to put content on the web, compared with what has to be done to convince print publishers your content is accurate and that they will make money by printing it.

However, many publishers who once provided only print materials have now turned to the web and have brought along their rigorous standards for accuracy. Among them are the publishers of government, university, and scholarly (peer-reviewed) journal websites. Sites for U.S. mainline news organizations also strive for accuracy rather than persuasion—because they know their readers have traditionally expected it. All in all, more websites now take appropriate care for accuracy than what used to be true on the web.

Nonetheless, it still remains very easy and inexpensive to publish on the web without any of the filters associated with print. So we all still need the critical thinking skills you’ll learn here to determine whether websites’ information is credible and relevant enough to suit your purpose.

6 Factors to Consider

Evaluating a website means considering the six factors below in relation to your purpose for the information. These factors are what you should gather clues about and use to decide whether a site is right for your purpose.

- The source’s neighborhood on the web
- Author and/or publisher’s background
- The degree of bias
- Recognition from others
- Thoroughness of the content
- Currency of the content

How many factors you consider at any one time depends on your purpose when seeking information. In other words, you’ll consider all six factors when you’re
looking for information for a research project or other high-stakes situation where making mistakes have serious consequences. But you might consider only the first three factors for many of your other information needs.

—— A Source's Neighborhood ——

To understand this concept and begin to use it, imagine that all the sites on the web constitute a community. Just like in a geographical community, there are neighborhoods in which individual sites hang out.

Thinking about what neighborhood a source is in on the web can help you decide whether the site is credible, relevant, and suits your purpose.

Visualize the web as a community. (Image source: John Atkinson, *Wrong Hands*)

**AUDIO: Neighborhoods on the Web**

Listen to the audio clip (or read the text version) to hear how intuitive this concept is. After you listen, the next activity will show you how to apply the concept.
TIP: Author’s Purpose for Print

Rather than examine print sources for their web neighborhood, examine them for their author’s purpose. Read the introduction and conclusion and look at the table of contents to discern the author’s purpose.

For instance, did the author intend to use the book or magazine article to inform/educate, persuade, sell, or entertain?

And is the author’s purpose suitable for your purpose? For instance, does the fact that a resource was intended to persuade mean it can’t help you answer your research question? (As you know from Sources and Information Needs, yes.)

ACTIVITY: Self-Check

Why might you want to read information on an advocacy site (from the neighborhood of sites that promote particular ideas and behavior)—even when you’re writing a term paper and it’s not acceptable to cite that source because it persuades instead of educates and is not objective? See the bottom of the page for the answer.

Clues About a Website’s Neighborhood

Watch the Understanding Google Search Results movie to better understand how you can quickly determine what kind of information you’ve turned up in a Google search.

MOVIE: Understanding Google Search Results (no audio)
On a website, check pages labeled About This Site, Mission, Site Index, and Site Map, if available. (If such pages or similarly labeled ones don’t exist, it may be a sign that the site may be less trustworthy.)

Ask yourself these questions to gather clues that will help you decide what neighborhood you’re in:

- **Is the site selling products and/or services (even if there are articles and other useful information, too)?** Perhaps it’s a retail, service center, or corporate site.
- **Are there membership applications and requests for contributions of money or time anywhere on the site?** They’re usually a sign that you’re on a site that promotes particular ideas or behavior – in other words, they’re in the advocacy neighborhood.
- **Do postings, articles, reports, and/or policy papers give a one-sided view or multiple views on issues, people, and events?** If they’re one-sided, the site is probably a commercial site or in the advocacy group neighborhood. If the information is even-handed and includes different sides of an issue, the site is more likely to be on the library/museum, school, or traditional U.S. news side of town. Sites there usually provide information designed to educate rather than persuade. (This does not apply to material labeled something like Opinion, of course, just as it doesn’t apply to the editorial pages of print newspapers.)

**ACTIVITY: Neighborhoods on the Web**

Work through the three activities below to practice the concept of neighborhoods on the web.

**Matching Site to Neighborhood** – [Open activity in a web browser](#).

**Matching Neighborhood to Purpose** – [Open activity in a web browser](#).

**Which Neighborhood?** – [Open activity in a web browser](#).
EXAMPLE: Check Them Out

Think we’re making a mountain out of a molehill about being careful about web sources? Please click the web icons below to look at three websites. Is there an inference(s) you can make that applies to all three? Perhaps that whether a website looks professionally done is not enough to insure that it is credible.

- RYT Hospital: Dwayne Medical Center – http://rythospital.com
- Dog Island – http://www.thedogisland.com
- The Manhattan Airport Foundation – http://manhattanairport.org

Making the Inference

Consider the clues. Then decide the extent that the site’s neighborhood is acceptable for your purpose. It might help to grade the extent that this factor contributes to the site being suitable on a scale like this one:

- A – Very Acceptable
- B – Good, but could be better
- C – OK in a pinch
- D – Marginal
- F – Unacceptable

You’ll want to make a note of the resource’s grade for neighborhood so you can combine it later with the grades you give the other factors.

ANSWER TO ACTIVITY: Self-Check

The answer to the “Self-Check” Activity above is:

Advocacy sites are useful to learn about a particular viewpoint. They may provide a wealth of information—you just have to keep in mind that it’s just one side’s view and then also seek out the other side’s view.
--- Author and Publisher ---

You’ll always want to know who’s providing the information for a website or other source. Do they have the education, training, or other experience that make you think they are authorities on the subject covered? Or do they just have opinions?

The more you know about the author and/or publisher, the more confidence you can have in your decision for or against using content from that source.

Authors and publishers can be individuals or organizations, including companies. (Web masters usually put things on the site, but do not decide what goes on all but the smallest websites. They often just carry out others’ decisions.)

Sites that do not identify an author or publisher are generally considered less credible for many purposes, including term papers and other high-stakes projects. The same is true for sources in other formats.

**Clues About an Author’s and/or Publisher’s Background**

If they’re available, take a look at pages called such things as About This Site, About Us, or Our Team first. But you may need to browse around a site further to determine its author. Look for a link labeled with anything that seems like it would lead you to the author. Other sources, like books, usually have a few sentences about the author on the back cover or on the flap inside the back cover.

You may find the publisher’s name next to the copyright symbol, ©, at the bottom of at least some pages on a site. In books the identity of the publisher is traditionally on the back of the title page.

Sometimes it helps to look for whether a site belongs to a single person or to a reputable organization. Because many colleges and universities offer blog space to their faculty, staff, and students that uses the university’s web domain, this evaluation can require deeper analysis than just looking at the address.
Personal blogs may not reflect the official views of an organization or meet the standards of formal publication.

In a similar manner, a tilde symbol (~) preceding a directory name in the site address indicates that the page is in a “personal” directory on the server and is not an official publication of that organization. For example, you could tell that Jones’ web page was not an official publication of XYZ University if his site’s address was: http://www.XYZuniversity.edu/~jones/page.html. The tilde indicates it’s just a personal web page—in the Residences, not Schools, neighborhood of the web.

Unless you find information about the author to the contrary, such blogs and sites should not automatically be considered to have as much authority as content that is officially part of the university’s site. Or you may find that the author has a good academic reputation and is using their blog or website to share resources he or she authored and even published elsewhere. That would nudge him or her toward the Schools neighborhood.

Learning what they have published before can also help you decide whether that organization or individual should be considered credible on the topic. Listed below are sources to use to look for what the organization or individual may have published and what has been published about them.

**TIP: Find Out What the Author (Person or Organization) Has Published**

**Library Catalogs** – Search in a large library catalog to find books written by the author.

For example:

- OhioLINK
- WorldCat@OSU

**Web Article Database** – Use a free web article database to search for articles by this author. Note: While you can search for free, you may not be able to retrieve articles unless searching through a library.

For example:

- Google Scholar
- MagPortal.com
**Specialized Database** – Locate articles written by the author by using a specialized database that covers the same topical area as information on the website. Check your library’s website to find databases that you can use for this purpose. (Such databases are also called periodical indexes.)

For example:

- Use [ERIC](OSU users only) to locate any articles published by the author of an education website.

---

**TIP: Find Out What Has Been Written About The Author**

**Web Search Engine** – Use a search engine to find web pages where the author’s name is mentioned. (Be sure to search for the name as a phrase, as in “Jane Doe”)

For example:

- [Google](OSU users only)
- [Yippy](OSU users only)

**Full-Text Article Database** – Use a database that searches the full-text of articles (not just descriptive information about the article) to find those that mention people and organizations.

For example:

- [Academic Search Complete](OSU users only)
- [LexisNexis Academic](OSU users only)

**Specialized Biographical Sources** – Use directories and indexes provided by your library to find backgrounds of people.

For example:

- [Biography Reference Bank](OSU users only)
ACTIVITY: Identifying Authors

Open activity in a web browser.

Making the Inference

Consider the clues. Then decide the extent that the source’s author and/or publisher is acceptable for your purpose. It might help to grade the extent that this factor contributes to the site being suitable on a scale like this one:

- A – Very Acceptable
- B – Good, but could be better
- C – OK in a pinch
- D – Marginal
- F – Unacceptable

You’ll want to make a note of the source’s grade for author and/or publisher so you can combine it later with the grades you give the other factors.

—— Degree of Bias ——

Most of us have biases, and we can easily fool ourselves if we don’t make a conscious effort to keep our minds open to new information. Psychologists have shown over and over again that humans naturally tend to accept any information that supports what they already believe, even if the information isn’t very reliable. And humans also naturally tend to reject information that conflicts with those beliefs, even if the information is solid. These predilections are powerful. Unless we make an active effort to listen to all sides we can become trapped into believing something that isn’t so, and won’t even know it.

— A Process for Avoiding Deception, Annenberg Classroom

Probably all sources exhibit some bias, simply because it’s impossible for their authors to avoid letting their life experience and education have an effect on their decisions about what is relevant to put on the site and what to say about it.
But that kind of unavoidable bias is very different from a wholesale effort to shape the message so the site (or other source) amounts to a persuasive advertisement for something important to the author.

Even if the effort is not as strong as a wholesale effort, authors can find many—sometimes subtle—ways to shape communication until it loses its integrity. Such communication is too persuasive, meaning the author has sacrificed its value as information in order to persuade.

While sifting through all the web messages for the ones that suit your purpose, you’ll have to pay attention to both what’s on the sites and in your own mind.

That’s because one of the things that gets in the way of identifying evidence of bias on websites is our own biases. Sometimes the things that look most correct to us are the ones that play to our own biases.

Clues About Bias

Review the website or other source and look for evidence that the site exhibits more or less bias. The factors below provide some clues.
### Coverage

**Unbiased:** This source’s information is not drastically different from coverage of the topic elsewhere. Information and opinion about the topic don’t seem to come out of nowhere. It doesn’t seem as though information has been shaped to fit.

**Biased:** Compared to what you’ve found in other sources covering the same topic, this content seems to omit a lot of information about the topic, emphasize vastly different aspects of it, and/or contain stereotypes or overly simplified information. Everything seems to fit the site’s theme, even though you know there are various ways to look at the issue(s).

### Citing Sources

**Unbiased:** The source links to any earlier news or documents it refers to.

**Biased:** The source refers to earlier news or documents, but does not link to the news report or document itself.

### Evidence

**Unbiased:** Statements are supported by evidence and documentation.

**Biased:** There is little evidence and documentation presented, just assertions that seem intended to persuade by themselves.

### Vested Interest

**Unbiased:** There is no overt evidence that the author will benefit from whichever way the topic is decided.

**Biased:** The author seems to have a “vested interest” in the topic. For instance, if the site asks for contributions, the author probably will benefit if contributions are made. Or, perhaps the author may get to continue his or her job if the topic that the website promotes gets decided in a particular way.
### Imperative Language

| **Unbiased:** Statements are made without strong emphasis and without provocative twists. There aren’t many exclamation points. | **Biased:** There are many strongly worded assertions. There are a lot of exclamation points. |

### Multiple Viewpoints

| **Unbiased:** Both pro and con viewpoints are provided about controversial issues. | **Biased:** Only one version of the truth is presented about controversial issues. |

### EXAMPLES: Bias

- [The Cigarette Papers](#) – Sources of information are documented for each chapter.
- [White Poison: The Horrors of Milk](#) – Claims are not supported by documentation.

### Making the Inference

Consider the clues. Then decide the extent that the bias you detected on the source is acceptable for your purpose. It might help to grade the extent that this factor contributes to the site being suitable on a scale like this one:

- A – Very Acceptable
- B – Good, but could be better
- C – OK in a pinch
- D – Marginal
- F – Unacceptable
You’ll want to make a note of the source’s grade for bias so you can combine it later with the grades you give the other factors.

--- Recognition from Others ---

Checking to see whether others have linked to a website or tagged or cited it lets you know who else on the web recognizes the value of the site’s content. Reader comments and ratings can also be informative about some sites you may be evaluating, such as blogs.

If your source is a book, the blurbs on the front or back cover give you information from authors, experts, or other well-known people who were willing to praise the book and/or author. The same kind of “mini-reviews” may be available on the publisher’s website. You can also look for reviews of the book or other source by using Google and Google Scholar.

Those links, tags, bookmarks, citations, and positive reader comments and ratings are evidence that other authors consider the site exemplary. Book reviews, of course, may be either positive or negative.

Exactly which individuals and organizations are doing the linking, tagging, citing, rating and commenting may also be important to you. There may be some company you’d rather your site not keep! Or, maybe the sites that link to the one you’re evaluating may help solidify your positive feelings about the site.

Don’t let an absence of links, tags, citations, ratings, and comments damn the site in your evaluation. Perhaps it’s just not well-known to other authors. The lack of them should just mean this factor can’t add any positive or negative weight to your eventual decision to use the site—it’s a neutral.
**TIP: Peer Review as Recognition**

The peer review most articles undergo before publication in a scholarly journal lets you know they’re considered by other scholars to be worth publishing. You might also be interested to see to what extent other researchers have used an article after it was published. (That use is what necessitates their citation.) But keep in mind that there may not be any citations for very new popular magazines, blogs, or scholarly journal articles.

**ACTIVITY: Influence You**

Would the blurb on the front cover of *Redirect* by psychologist Timothy Wilson influence you positively or negatively in your evaluation of the book?
The blurb says: “There are few academics who write with as much grace and wisdom as Timothy Wilson. Redirect is a masterpiece.” – Malcolm Gladwell

**Clues about Recognition**

**Find sites that link to a particular URL.** For Google and Yahoo!, enter `link:[URL of known site]` in the search box

For example: [link:www.deathpenaltyinfo.org](http://www.deathpenaltyinfo.org)
Find citations of an article. Although there is no simple way to find every source that cites an article in a popular magazine, a blog, or a scholarly journal, there are some ways to look for these connections.

For articles published in popular magazines or blogs, enter the title of the article in quotes in the search box of a search engine like Google. The resulting list should show you the original article you’re evaluating, plus other sites that have mentioned it in some way. Click on those that you want to know more about.

EXAMPLE: Finding Mentions

Here’s an example using Google to find mentions for a blog article called Help Wanted: 11 million college grads by Bill Gates.
ACTIVITY: Inferences

Use Google Search to determine how many sites have made links to these sites. Click each link below to launch your web browser. Notice what is filled in the search bar to find linked sites.

- www.ipl.org
- www.goaskalice.columbia.edu

For articles published in scholarly journals, use Google Scholar to enter the title of the article in quotes. In the results list, find the article you’re evaluating. (Many articles have similar titles.) Look for the number of citations in the lower left of the listing for your article. If you want more information on the authors who have done the citing, click on the citation number for a clickable list of articles or papers and get the names of authors to look up at the end of the articles or with a search engine. (This is a good way to discover more articles about your topic, too.)

Google Scholar shows how many articles have cited a given article. View the live example.
You can also use specialized citation databases, such as Web of Science and Scopus (both OSU only), to find where an article or author has been cited.

---

Making the Inference

Consider the clues. Then decide the extent that the source’s recognition from others is acceptable for your purpose. It might help to grade the extent that this factor contributes to the site being suitable on a scale like this one:

- A – Very Acceptable
- B – Good, but could be better
- C – OK in a pinch
- D – Marginal
- F – Unacceptable

You’ll want to make a note of the source’s grade for recognition so you can combine it later with the grades you give the other factors.

---

Currency of the Content

If the topic of your research is time-sensitive, the currency of information in the source will be important to your decision about whether it fits your purpose. You’ll be asking yourself whether its information is from the right time period to suit your purpose.

For some topics, that may mean you want the most up-to-date information. But for other topics, you may need primary sources—those created at the same time as the event or condition you’re researching. (Secondary sources are those that cite, comment on, or build on primary sources.)

---

Clues About Currency

Click around a website to gather clues as to how recent the information is. Look for statements about when the information was created:
The dateline on a newspaper article represented there, for instance, and/or when it was posted on the site
Page creation or revision dates
A “What’s New” page that describes when content was updated
Press releases or any other dated materials

Also test links on a website to see whether they work or are broken. If several are broken, perhaps no one is looking after the site anymore, which could indicate there is newer information that is relevant to the site that has never been posted there.

In a book, look at the back of the title page to see when it was published. Also take a look at the publication dates for sources listed in the bibliography. That will help you determine how current the information cited in the book is.

ACTIVITY: Currency

Click the image to open a web browser to the website Jewish Studies Resources, http://www.princeton.edu/~pressman/jewish.html.

Notice that tilde (~) in the URL. As mentioned earlier, that indicates this is not an official page of Princeton University but instead is a personal page. Find the name of the person who seems to be identified as the author of the home page at the bottom of that page. Is she an expert on history sources?

Now consider how you could determine whether the site’s information is current enough for your purpose.

EXAMPLE: Currency

Check out how currency is handled on TED. This site provides videos of speakers talking about new ideas in technology, entertainment, and design. (That’s what TED stands for.) There’s a New Releases page and every video has the date on which the speaker presented. See the bottom of the page for the answer.
Making the Inference

Consider the clues. Then decide the extent that the source’s currency is acceptable for your purpose. It might help to grade the extent that this factor contributes to the source being suitable on a scale like this one:

A – Very Acceptable
B – Good, but could be better
C – OK in a pinch
D – Marginal
F – Unacceptable

You’ll want to make a note of the resource’s grade for currency so you can combine it later with the grades you give the other factors.

ANSWER TO ACTIVITY: Currency

The answer to the “Currency” Activity above is:

Nancy Pressman Levy.

The author is Nancy Pressman Levy. Searching that name shows that, among other library positions, she’s been the head of the library for public and international affairs at Princeton and has written many guides and other items about history and other subjects for Princeton University’s library. It’s fair to say she is an expert in history sources.

The home page of this site on web sources about Jewish Studies was last updated 11/2003. However, this page serves as an index to other pages, which may have different degrees of being up-to-date. So you could consider the currency of each.
—— Thoroughness ——

Figuring out whether a website or other source is suitable for your purpose also means looking at how thoroughly it covers your topic.

You can evaluate thoroughness in relation to other sources on the same topic. Compare your source to how other sources cover the material, checking for missing topics or perspectives.

Clues About Thoroughness

Click around a site to get some idea of how thoroughly it covers the topic. If the source you are evaluating is a print resource, read the introduction and conclusion and also the table of contents to get a glimpse of what it covers. Look at the index to see what subject is covered with the most pages. Is it thorough enough to meet your information need?

TIP: Related Sites

Use Google to find other sites on the same topic by entering related:[the URL of the site you know] in the search box.

For example: related:guides.osu.edu

Use this technique to browse other sites Google turns up. Do other sites cover
aspects of the topic that are missing from the site you are evaluating? Or does your site stack up pretty well against the competition?

ACTIVITY: Evaluating Websites

Open activity in a web browser.

Making the Inference

Consider the clues. Then decide the extent that the source’s thoroughness is acceptable for your purpose. It might help to grade the extent that this factor contributes to the source being suitable on a scale like this one:

A – Very Acceptable
B – Good, but could be better
C – OK in a pinch
D – Marginal
F – Unacceptable

You’ll want to make a note of the source’s grade for thoroughness so you can combine it later with the grades you give the other factors.

— Combining the Factors —

Once you’ve considered each factor used in evaluating a source, it’s important to take a look at the inferences you made about them. Now is the time to look at those grades all together—to average them if you’ve been assigning grades—and to make one more inference.

Taking the grade on each factor into account, can you infer that the source is relevant and credible enough for your purpose? If it isn’t, this is one source that can’t be helpful in your project. If it is relevant and credible enough, you can use information from that resource with confidence.
Making the Final Inference

Assume you’re writing a term paper and are considering using information from Site XYZ. You ran through the evaluation process as you looked over the site, and you made notes about the grades you assigned.

The grades you gave individual factors are:

- Neighborhood: A
- Author/publisher’s background: B
- Degree of bias: A
- Recognition from others: No Evidence
- Thoroughness: C
- Currency of the content: A

You average the grades (A=4, B=3, C=2, D=1, F=0), remembering not to include the factor on which you gave no grade. The score was 3.4, about a B, which is a “Good, but could be better” score on the scale we used in this tutorial. You decide to use information from this site in your project.

A - Very Acceptable
B - Good, but could be better
C - OK in a pinch
D - Marginal
F - Unacceptable
You likely know that research projects always need a reference or a works cited page (also called a bibliography). But have you ever wondered why?

There are some big picture reasons that don’t often get articulated that might help you get better at meeting the citation needs of research projects. It’s helpful to understand both the theory behind citing, as well as the mechanics of it, to really become a pro.

**TIP: How to Cite Sources**

This section introduces the concept of citing source, so you can begin your search for sources with it in mind. See [How to Cite Sources](#) for examples and the steps for citing appropriately.
In everyday life, we often have conversations where we share new insights with each other. Sometimes these are insights we’ve developed on our own through the course of our own everyday experiences, thinking, and reflection. Sometimes these insights come after talking to other people and learning from additional perspectives. When we relate the new things we have learned to our family, friends, or co-workers, we may or may not fill them in on how these thoughts came to us.

In everyday conversation and political speeches, evidence for arguments is often not provided. (Image source: XKCD)

Academic research leads us to the latter type of insight—the insight that comes from gaining perspectives and understandings from other people through what we read or watch. In academic work we must tell our readers who and what led us to our conclusions. Documenting our research is important because people rely on academic research to be authoritative, so it is essential for academic conversation to be as clear as possible. Documentation for clarity is a shared and respected practice, and it represents a core value of the academy called “academic integrity.” It is a way to distinguish academic conversations (or discourse) from everyday conversations (or discourse).

It is hard to talk about citation practices without considering some related concepts. Here are some definitions of those concepts that are often mentioned in assignments when citation is required.
What Is Academic Integrity?

Different universities have different definitions. Ohio State University uses this definition:

"Academic integrity is a commitment, even in the face of adversity, to five fundamental values: honesty, trust, fairness, respect, and responsibility. From these values flow principles of behavior that enable academic communities to translate ideals into action."

Please take a few moments to read the Office of Undergraduate Education web page that describes these values in more detail.

In other words, you must take full responsibility for your work, acknowledge your own efforts, and acknowledge the contributions of others’ efforts. Working/Writing with integrity requires accurately representing what you contributed as well as acknowledging how others have influenced your work. When you are a student, an accurate representation of your knowledge is important because it will allow both you and your professors to know the extent to which you have developed as a scholar.

What Is Academic Misconduct?

As you might imagine, academic misconduct is when you do not use integrity in your academic work. Academic misconduct includes many different unacceptable behaviors, but the one most relevant to what we are discussing here is submitting plagiarized work:

"Submitting plagiarized work for an academic requirement. Plagiarism is the representation of another’s work or ideas as one’s own; it includes the unacknowledged word-for-word use and/or paraphrasing of another person’s work, and/or the inappropriate unacknowledged use of another person’s ideas."

To see the full definition of academic misconduct, refer to the Ohio State University Code of Student Conduct.
NOTE: Check Your Syllabi

You might have noticed a reference to the Code of Student Conduct on several of your syllabi, as faculty are asked to include this statement for your benefit:

”It is the responsibility of the Committee on Academic Misconduct to investigate or establish procedures for the investigation of all reported cases of student academic misconduct. The term “academic misconduct” includes all forms of student academic misconduct wherever committed; illustrated by, but not limited to, cases of plagiarism and dishonest practices in connection with examinations. Instructors shall report all instances of alleged academic misconduct to the committee (Faculty Rule 3335-5-487). For additional information, see the Code of Student Conduct.”

What Is Plagiarism?

Plagiarism is defined by the OSU First Year Experience Office in this way:

”At any stage of the writing process, all academic work submitted to the teacher must be a result of a student’s own thought, research or self-expression. When a student submits work purporting to be his or her own, but which in any way borrows organization, ideas, wording or anything else from a source without appropriate acknowledgment of the fact, he/she is engaging in plagiarism.”

Take time to look at the full definition, which also describes another form of academic misconduct called “collusion.”

Plagiarism can be intentional (knowingly using someone else’s work and presenting it as your own) or unintentional (inaccurately or inadequately citing ideas and words from a source). It may be impossible for your professor to determine whether plagiarized work was intentional or unintentional. But in
either case, plagiarism puts both you and your professor in a compromising position.

While academic integrity calls for work resulting from your own effort, scholarship requires that you learn from others. So in the world of “academic scholarship” you are actually expected to learn new things from others AND come to new insights on your own. There is an implicit understanding that as a student you will be both using other’s knowledge as well as your own insights to create new scholarship. To do this in a way that meets academic integrity standards you must acknowledge the part of your work that develops from others’ efforts. You do this by citing the work of others. You plagiarize when you fail to acknowledge the work of others and do not follow appropriate citation guidelines.

For more information on plagiarism, see Handouts – Plagiarism from OSU’s Center for the Study and Teaching of Writing.

What Is Citing?

Citing, or citation, is a practice of documenting specific influences on your academic work. See How to Cite Sources for details.

As a student citing is important because it shows your reader (or professor) that you have invested time in learning what has already been learned and thought about the topic before offering your own perspective. It is the practice of giving credit to the sources that inform your work.

In other words, you must cite all the sources you quote directly, paraphrase, or summarize as you:

• Answer your research question
• Convince your audience
• Describe the situation around your research question and why the question is important
• Report what others have said about your question

Why Cite Sources?

Our definitions of academic integrity, academic misconduct and plagiarism, give us an important reason for citing the sources we use to accomplish academic research. Here are all the good reasons for citing.
To Avoid Plagiarism & Maintain Academic Integrity

Misrepresenting your academic achievements by not giving credit to others indicates a lack of academic integrity. This is not only looked down upon by the scholarly community, but it is also punished. When you are a student this could mean a failing grade or even expulsion from the university.

To Acknowledge the Work of Others

One major purpose of citations is to simply provide credit where it is due. When you provide accurate citations, you are acknowledging both the hard work that has gone into producing research and the person(s) who performed that research.

Think about the effort you put into your work (whether essays, reports, or even non-academic jobs): if someone else took credit for your ideas or words, would that seem fair, or would you expect to have your efforts recognized?

To Provide Credibility to Your Work & to Place Your Work in Context

Providing accurate citations puts your work and ideas into an academic context. They tell your reader that you’ve done your research and know what others have said about your topic. Not only do citations provide context for your work but they also lend credibility and authority to your claims.

For example, if you’re researching and writing about sustainability and construction, you should cite experts in sustainability, construction, and sustainable construction in order to demonstrate that you are well-versed in the most common ideas in the fields. Although you can make a claim about sustainable construction after doing research only in that particular field, your claim will carry more weight if you can demonstrate that your claim can be supported by the research of experts in closely related fields as well.

Citing sources about sustainability and construction as well as sustainable construction demonstrates the diversity of views and approaches to the topic. Further, proper citation also demonstrates the ways in which research is social: no one researches in a vacuum—we all rely on the work of others to help us during the research process.
To Help Your Future Researching Self & Other Researchers
Easily Locate Sources

Having accurate citations will help you as a researcher and writer keep track of the sources and information you find so that you can easily find the source again. Accurate citations may take some effort to produce, but they will save you time in the long run. So think of proper citation as a gift to your future researching self!

—— Other Challenges in Citing Sources ——

Besides the clarifications and difficulties around citing that we have already considered, there are additional challenges that might make knowing when and how to cite difficult for you.

Not Really Understanding the Material You’re Using

If you are working in a new field or subject area, you might have difficulty understanding the information from other scholars, thus making it difficult to know how to paraphrase or summarize that work properly.

Running Out of Time

When you are a student taking many classes simultaneously and facing many deadlines, it may be hard to devote the time needed to doing good scholarship and accurately representing the sources you have used. Research takes time. The sooner you can start and the more time you can devote to it, the better your work will be.

Shifting Cultural Expectations of Citation

Because of new technologies that make finding, using and sharing information easier, many of our cultural expectations around how to do that are changing as well. For example, blog posts often “reference” other articles or works by simply linking to them. It makes it easy for the reader to see where the author’s ideas have come from and to view the source very quickly. In these more informal writings, blog authors do not have a list of citations (bibliographic entries). The
links do the work for them. This is a great strategy for online digital mediums, but this method fails over time when links break and there are no hints (like an author, title and date) to know how else to find the reference, which might have moved.

This example of a cultural change of expectations in the non-academic world might make it seem that there has been a change in academic scholarship as well, or might make people new to academic scholarship even less familiar with citation. But in fact, the expectations around citing sources in academic research remain formal.
Sources that influenced your thinking and research are to be cited in academic writing.

Citing sources is an academic convention for keeping track of which sources influenced your own thinking and research. (See Ethical Use of Sources for many good reasons why you should cite others’ work.)

Most citations require two parts:

- the full bibliographic citation on the Bibliography page or References page of your final product, and
- an indication within your text (usually author and publication date) that tells your reader where you have used something that needs a citation.

With your in-text citation, your reader will be able to tell which full bibliographic citation you are referring to by paying attention to the author’s name and publication date.

Let’s look at an example.
EXAMPLE: Citations in Academic Writing

Here’s a citation in the text of an academic paper:

“Studies have shown that compared to passive learning, which occurs when students observing a lecture, students will learn more and will retain that learning longer if more active methods of teaching and learning are used (Bonwell and Eison 1991; Fink 2003)."

The information in parentheses above is a citation that coordinates with a list of full citations at the end of the paper.

At the end of the paper, these bibliographic entries appear in a reference list:

You can see the full article [OSU login required] from which this example was taken online.

Citation Styles

There are dozens of citation styles (called style guides). While each style requires much of the same publication information to be included in a citation, the styles differ from each other in formatting details such as capitalization, punctuation, and order of publication information.

Style guides set the specific rules for how to create both in-text citations and their full bibliographic citations.
EXAMPLE: Differences in Citation Styles

The image below shows bibliographic citations in four common styles. Notice that they contain author name, article title, journal title, publication year, and information about volume, issue, and pages. Notice also the small differences in punctuation, order of the elements, and formatting that do make a difference.

Differences between citation practices occur mainly in formatting.

Different citation styles reflect the values of the discipline for which they were written. For example:

- **APA**: Social sciences value timeliness, and so the in text citation in APA style includes the year of publication.
- **MLA**: The liberal arts and humanities are focused on language, and so MLA uses footnotes to make reading and following the text easier.

Steps for Citing

To write a proper citation we recommend following these steps, which will help you maintain accuracy and clarity in acknowledging sources.

Step 1: Choose Your Citation Style

Find out the name of the citation style you must use from your instructor, the directions for an assignment, or what you know your audience or publisher expects. OSU Libraries maintain a citation list that includes several styles. You
can also search for your style at the Purdue Online Writing Lab or use Google or Bing to find your style’s stylebook/handbook.

**TIP: Ask for Advice**

As there are over a dozen different citation styles and different disciplines prefer different styles, always check to see if your instructor requires a particular style. Also because the rules for citation styles can change and can be extensive, it is best to refer to the official handbooks/style guides when you can.

---

**Step 2: Create In-Text Citations**

Examine how the style guide that you’ve chosen recommends you handle in-text citations and then apply those recommendations to create your in-text citation.

---

**Step 3: Determine the Kind of Source**

After creating your in-text citation, now begin creating the full bibliographic citation that will appear on the References or Bibliography page by deciding what kind of source you have to cite (book, film, journal article, webpage, etc.).

---

**Step 4: Find an Example**

Find an example for that kind of source citation in the latest stylebook or handbook for your style in print or online.

Because technology changes faster than the style guides, not every single type of electronic source you might use will be detailed in the style guides. In these cases, simply refer to the guidelines for similar sources and use your best judgment.
Step 5: Identify Citation Elements

Identify in your source the publication information (title, author, date of publication, etc.) that the example says you should include in your citation.

MOVIE: Finding the Information You Need: PDF and HTML Journal Articles

View video

MOVIE: Finding the Information You Need: Citing Information for Web and Online Multimedia Sources

View video

Step 6: Create a Bibliographic Citation

Create your bibliographic citation by arranging publication information to match the example you chose in Step 4. Pay particular attention to what is and is not capitalized and to what punctuation and spaces separate each part that the example illustrates.

TIP: Citation Software

If you like, you can use citation generator software to arrange the information needed for your citation according to the style guide you chose. Learn more later in this section.

Activity: Deciphering Citations

Open activity in a web browser.
Citation Software

You may be familiar with the many citation generators that allow you to auto-generate reference lists from citation data. Some allow you to save and store citations to reuse them in different lists and in different work as needed.

Such tools are worth investigating and learning about for any long-term research project. Zotero is online and available for free to anyone from anywhere. RefWorks and EndNote are available to all OSU affiliates from anywhere because the library subscribes to this service for the campus. For information on using any of these tools, go to software available to OSU students.

Common Citations Tools

Good reasons to use citation generation software include:

- To save time: it takes citation generation software only a few seconds to create a citation.
- To easily convert citations from one style to another.
- To have a centralized source list that is not attached to a specific project, which allows you to reuse references (citations) in various projects.

Care you must use with citation generation software includes:

- Citation generation software is only as good as the information entered into it. In other words, if you provide incorrect information or do not include some information, then your citation will be incorrect.
- Most citation generation software can create citations by searching for the information online. Sometimes software can pull the information from the wrong edition of a source, for example, or specific formatting (such as italics) might be lost. Or perhaps the generator didn’t use the latest version of the style guide. So always review the citations you create with this software.

When to Cite

Citing sources is often articulated as a straightforward, rule-based practice. In fact, there are many gray areas around citation, and learning how to apply
citation guidelines takes practice and education. If you are confused by it, you are not alone – in fact you might be doing some good thinking. Here are some guidelines to help you navigate citation practices.

**Cite when you are directly quoting.** This is the easiest rule to understand. If you are stating word for word what someone else has already written, you must put quotes around those words and you must give credit to the original author. Not doing so would mean that you are letting your reader believe these words are your own and represent your own effort.

**Cite when you are summarizing and paraphrasing.** This is a trickier area to understand. First of all, summarizing and paraphrasing are two related practices but they are not the same. Summarizing is when you read a text, consider the main points, and provide a shorter version of what you learned. Paraphrasing is when you restate what the original author said in your own words and in your own tone. Both summarizing and paraphrasing require good writing skills and an accurate understanding of the material you are trying to convey. Summarizing and paraphrasing are not easy to do when you are a beginning academic researcher, but these skills become easier to perform over time with practice.

**Cite when you are citing something that is highly debatable.** For example, if you want to claim that the Patriot Act has been an important tool for national security, you should be prepared to give examples of how it has helped and how experts have claimed that it has helped. Many U.S. citizens concerned that it violates privacy rights won’t agree with you, and they will be able to find commentary that the Patriot Act has been more harmful to the nation than helpful. You need to be prepared to show such skeptics that you have experts on your side.

**TIP: Why Cite Sources?**

This section covers how and when to cite sources. For discussion of why to cite sources, see [Ethical Use of Sources](#).

---

**When Don’t You Cite?**

**Don’t cite when what you are saying is your own insight.** As you learned in [Academic Argument](#), research involves forming opinions and insights around what you learn. You may be citing several sources that have helped you learn, but at some point you are integrating your own opinion, conclusion, or insight into the work. The fact that you are NOT citing it helps the reader understand that this
portion of the work is your unique contribution developed through your own research efforts.

**Don’t cite when you are stating common knowledge.** What is common knowledge is sometimes difficult to discern. Generally quick facts like historical dates or events are not cited because they are common knowledge.

Examples of information that would not need to be cited include:

- The Declaration of Independence was signed in 1776.
- Barack Obama became the 44th president of the United States in January, 2009.

Some quick facts, such as statistics, are trickier. For example, the number of gun-related deaths per year probably should be cited, because there are a lot of ways this number could be determined (does the number include murder only, or suicides and accidents, as well?) and there might be different numbers provided by different organizations, each with an agenda around gun laws.

A guideline that can help with determining whether or not to cite facts is to determine whether the same data is repeated in multiple sources. If it is not, it is best to cite.

The other thing that makes this determination difficult might be that what seems new and insightful to you might be common knowledge to an expert in the field. You have to use your best judgment, and probably err on the side of over-citing, as you are learning to do academic research. You can seek the advice of your instructor, a writing tutor, or a librarian. Knowing what is and is not common knowledge is a practiced skill that gets easier with time and with your own increased knowledge.
TIP: Why You Can’t Cite Wikipedia

You’ve likely been told at some point that you can’t cite Wikipedia, or any encyclopedia for that matter, in your scholarly work.

The reason is that such entries are meant to prepare you to do research. Wikipedia entries, which are tertiary sources, are already a summary of what is known about the topic. Someone else has already done the labor of synthesizing lots of information into a concise and quick way of learning about the topic.

So while Wikipedia is a great shortcut for getting context, background, and a quick lesson on topics that might not be familiar to you, don’t quote, paraphrase, or summarize from it. Use it to educate yourself. It is a starting point meant to prepare you to do research.

ACTIVITY: To Cite or Not to Cite?

Open activity in a web browser.
Nearly all scholarly writing makes an argument. That’s because its purpose is to create new knowledge so it can be debated in order to confirm, dis-confirm, or improve it. That arguing takes place mostly in journals and scholarly books and at conferences. It’s called the scholarly conversation, and it’s that conversation that moves forward what we humans know.

TIP: Tutorial on Scholarly Publishing

View an overview of the different ways in which scholars share their work with each other and the public.

Open in a web browser.

Your scholarly writing for classes should do the same—make an argument—just
like your professors’ journal article, scholarly book, and conference presentation writing does. (You may not have realized that the writing you’re required to do mirrors what scholars all over the university, country, and world must do to create new knowledge and debate it. Of course, you may be a beginner at constructing arguments in writing, while most professors have been at it for some time. And your audience (for now) also may be more limited than your professor’s. But the process is much the same. As you complete your research assignments, you, too, are entering the scholarly conversation.)

Making an argument means trying to convince others that you are correct as you describe a thing, situation, or phenomenon and/or persuade them to take a particular action. Important not just in college, that skill will be necessary for nearly every professional job you hold after college. So learning how to make an argument is good job preparation, even if you do not choose a scholarly career.

Realizing that your term paper, essay, blog post, or poster is to make an argument gives you a big head start because right off you know the sources you’re going to need are those that will let you write the components of an argument for your reader.

Happily (and not coincidentally), most of those components coincide with the information needs we’ve been talking about. Filling an information need by using sources will enable you to write the corresponding argument component in your final product.

— Components of an Argument —

Making an argument in an essay, term paper, or other college writing task is like laying out a case in court. Just as there are conventions that attorneys must adhere to as they make their arguments in court, there are conventions in arguments made in college assignments. Among those conventions is to use the components of an argument.

NOTE:

This section on making an argument was developed with the help of “Making Good Arguments” in The Craft of Research, by Wayne Booth, Gregory Colomb, and Joseph Williams, University of Chicago Press, 2003.

The arguments you’re used to hearing or participating in with friends about something that is uncertain or needs to be decided contain the same components
as the ones you’ll need to use in essays and term papers. Arguments contain those components because those are the ones that work—used together, they stand the best chance of persuading others that you are correct.

For instance, the question gets things started off. The claim, or thesis, tells people what you consider a true way of describing a thing, situation, or phenomenon or what action you think should be taken. The reservations, alternatives, and objections that someone else brings up in your sources or that you imagine your readers logically might have allow you to demonstrate how your reasons and evidence (maybe) overcome that kind of thinking—and (you hope) your claim/thesis comes out stronger for having withstood that test.

**ACTIVITY: Labeled Components**

Read the short dialog on pages 114 and 115 in the ebook *The Craft of Research* by Wayne Booth, Gregory Colomb, and Joseph Williams. The components of an argument are labeled for you.

**EXAMPLE: Argument as a Dialog**

Here’s a dialog of an argument, with the most important components labeled.

**Jerald:** Where should we have my parents take us for dinner when they’re here on Sunday? *He asks the question about something that’s unsettled.*

**Cathy:** We should go to The Cascades! *She makes her main claim to answer the question.* It’s the nicest place around. *Another claim, which functions as a reason for the main claim.*

**Jerald:** How so? *He asks for a reason to believe her claims.*

**Cathy:** White table cloths. *She gives a reason.*
Jerald: What’s that have to do with how good the food is?  
[He doesn’t see how her reason is relevant to the claim.]

Cathy: Table cloths make restaurants seem upscale. [She relates her reason for the claims.] And I’ve read a survey in Columbus Metro that says the Cascades is one of the most popular restaurants in town. [She offers evidence.]

Jerald: I never read the Metro. And Dino’s has table cloths.  
[He offers a point that contradicts her reason.]

Cathy: I know, but those are checkered! I’m talking about heavy white ones. [She acknowledges his point and responds to it.]

Jerald: My dad loves Italian food. I guess he’s kind of a checkered-table-cloth kind of guy? [He raises another reservation or objection.]

Cathy: Yeah, but? Well, I know The Cascades has some Italian things on the menu. I mean, it’s not known for its Italian food but you can order it there. Given how nice the place is, it will probably be gourmet Italian food. [She acknowledges his point and responds to it. There’s another claim in there.]

Jerald: Ha! My dad, the gourmet? Hey, maybe this place is too expensive. [He raises another reservation.]

Cathy: More than someplace like Dino’s. [She concedes his point.]
ACTIVITY: Components of an Argument

Open activity in a web browser.

Argument and Information Needs

Each component of an argument relates back to your information needs.
###Need

**To get background information and develop a research question (if your professor hasn’t given you a specific question)**

- Your **research question**, which probably will not appear in your term paper or essay but which drives the entire research process

---

###Component of Your Argument

**To answer your research question**

- Your **thesis** (may also be called your **claim**)

---

**To convince your audience your answer is correct or at least reasonable**

- **Reasons** for your thesis and **evidence** for your reasons
- **Acknowledgement** that others may have reservations or objections to your argument or alternative solutions
- **Reasons** why others’ opinions are incorrect or not important

---

**To describe the situation around your research question and why it’s important**

- This is not an argument component but is usually an important part of term papers and essays. It is usually done in the introduction in order to help readers understand and to encourage them to continue reading.

---

**To report what others have said that’s relevant**

- **Reasons** for your thesis and **evidence** for your reasons
- **Acknowledgement** that others may have reservations or objections to your argument or alternative solutions
- **Reasons** why others’ opinions are incorrect or not important

---

###Order of the Components

The order in which the components should appear in your argument essays, papers, and posters may depend on which discipline your course is in. So always adhere to the advice provided by your professor and what you learn in class.

One common arrangement for argument essays and term papers is to begin with
an introduction that explains why the situation is important—why the reader should care about it. Your research question will probably not appear, but your answer to it (your thesis, or claim) usually appears as the last sentence or two of the introduction.

The body of your essay or paper follows and consists of:

- Your reasons the thesis is correct or at least reasonable.
- The evidence that supports each reason, often occurring right after the reason it supports.
- An acknowledgement that some people have/could have objections, reservations, counterarguments, or alternative solutions to your argument and a statement of each. (Posters often don’t have room for this component.)
- A response to each acknowledgement that explains why that criticism is incorrect or not very important. Sometimes you might have to concede a point you think is unimportant if you can’t really refute it.

(Again, posters often don’t have much room for this component.)

After the body, the paper or essay ends with a conclusion, which states your thesis in a slightly different way than occurred in the introduction. (Posters often don’t have much room for this component.)

---

**A Blueprint for Argument**

It’s no accident that people are said to make arguments—they’re all constructed, and these components are the building blocks. The components are important because of what they contribute. The components generally, though not always, appear in a certain order because they build on or respond to one another.

For example, the thesis or claim is derived from the initial question. The reasons are bolstered by evidence to support the claim. Objections are raised, acknowledged and subsequently responded to.
The components of argument build on each other.

**ACTIVITY: Order of Argument Components**

[Open activity in a web browser.]

--- **Where You Get the Components** ---

This section will help you figure that out which components may come from your professor, which you just have to think about, which you have to write, and which you have to find in your sources.
Here, again, are the components we’ll cover:

- The question you (or your professor) want answered
- Your claim or thesis
- One or more reasons for your thesis
- Evidence for each reason
- Others’ objections, counterarguments, or alternative solutions
- Your acknowledgment of others’ objections, counterarguments, or alternative solutions
- Response to others’ objections, counterarguments, or alternative solutions

The Question You Want Answered

Sometimes your professor will give you the research question, but probably more often he or she will expect you to develop your own from an assigned topic. You learned how to develop research questions in another section. Though vitally important, they are often not stated in essays or term papers but are usually stated in reports of original studies, such as theses, dissertations, and journal articles.

EXAMPLES: Research Questions for Hypothetical Essays or Term Papers

- Is the recent occurrence of stronger hurricanes related to global warming?
- Did the death of his beloved daughter have any effect on the writings of Mark Twain?

Your Claim or Thesis

You write the claim or thesis—it doesn’t come directly from a resource. Instead, it is the conclusion you come to in answer to your question after you’ve read/listened to/looked at some sources. So it is a statement, not a question or hypothesis, that you plan to prove or disprove with your research.

After you’ve done more research, you may need to change your thesis. That happens all the time—not because you did anything wrong but because you learned more.
EXAMPLES: Claims (or Theses) for Hypothetical Essays or Term Papers

- The strength of hurricanes has not been affected appreciably by global warming.
- Mark Twain wrote more urgently and with less humor during the four years immediately after the death of his daughter.

One or More Reasons

Write what you believe makes your thesis (the answer to your research question) true. That’s your reason or reasons. Each reason is a summary statement of evidence you found in your research. The kinds of evidence considered convincing varies by discipline, so you will be looking at different sources, depending on your discipline. How many reasons you need depends on how complex your thesis and subject matter are, what you found in your sources, and how long your essay or term paper must be. It’s always a good idea to write your reasons in a way that is easy for your audience to understand and be persuaded by.

EXAMPLES: Reasons in Hypothetical Essays or Term Papers

- Current computer modeling and the analysis of historical data about previous hurricane strength do not indicate that global warming is increasing the strength of hurricanes.
- My content analysis and a comparison of publication rates four years before and after Mark Twain’s daughter died indicate that his writing was more urgent and less humorous for four years after. It is reasonable to conclude that her death caused that change.

Evidence for Each Reason

This is the evidence you summarized earlier as each reason your thesis is true. You will be directly quoting, paraphrasing, and summarizing your sources to make the case that your audience should agree with you.
EXAMPLES: Evidence for Reasons in Hypothetical Essays or Term Papers

- Report the results of the computer modeling and the analysis of historical data on temperatures and hurricane strength.
- Report the results of your comparison of writing content and publication rate before and after Twain’s daughter’s death.

Others’ Objections, Counterarguments, or Alternative Solutions

Do any of your sources not agree with your thesis? You’ll have to bring those up in your term paper. In addition, put yourself in your readers’ shoes. What might they not find logical in your argument? In other words, which reason(s) and corresponding evidence might they find lacking? Did you find clues to what these could be in your sources? Or maybe you can imagine them thinking some aspect of what you think is evidence is illogical.

EXAMPLES: Objections, Counterarguments, or Alternative Solutions in Hypothetical Essays or Term Papers

- Imagine that the reader might think: Computer modeling done in 2007-08 did show an effect for ocean temperature on hurricane strength.
- Imagine that the reader might think: Computerized content analysis tools are sort of blunt instruments and shouldn’t be used to do precise work.

Your Acknowledgement of Others’ Objections, Counterarguments, or Alternative Solutions

What will you write to bring up each of those objections, counterarguments, and alternative solutions? Some examples:

- I can imagine skeptics wanting to point out...
Perhaps some readers would say...
I think those who come from XYZ would differ with me...

It all depends on what objections, counterarguments, and alternative solutions you come up with.

EXAMPLES: Acknowledgement of Others’ Objections, Counterarguments, or Alternative Solutions in Hypothetical Essays or Term Papers:

- Some researchers may point out that computer modeling done in 2007-08 did show an effect for ocean temperature on hurricane strength.
- Readers may think that a computerized content analysis tool cannot do justice to the subtleties of text.

Response to Others’ Objections, Counterarguments, or Alternative Solutions

You must write your response to each objection, counterargument, or alternative solution brought up or that you’ve thought of. (You’re likely to have found clues for what to say in your sources.) The reason you have to include this is that you can’t very easily convince your audience until you show them how your claim stacks up against the opinions and reasoning of other people who don’t at the moment agree with you.

EXAMPLES: Response to Others’ Objections, Counterarguments, or Alternative Solutions in Hypothetical Essays or Term Papers:

- But the more current modeling equipment used here is able to take the XYZ into effect, which negates any difference in readings for different temperatures.
- Unlike other content tools, the XYZ Content Analysis Measure is able to take into account an author’s tone.
ACTIVITY: Quick Check

—— Your Argument Plan ——

Here is our Plan for Sources form from Sources and Information Needs updated with information from this section on where in your final product you’ll likely use particular kinds of sources. This one is filled out for a term paper as an example. You can download a blank copy to use with your own projects at http://go.osu.edu/planforsources. (Our Source Locator can help you figure out where to look for sources.)
<table>
<thead>
<tr>
<th>Information Needs / Argument Component / Parts of Final Product</th>
<th>Kinds of Sources (Popular, Professional, or Scholarly) That Should Meet Each Need</th>
<th>Publication Formats Likely to be Helpful in Meeting Each Need</th>
<th>Where to Look</th>
</tr>
</thead>
<tbody>
<tr>
<td>To answer your research question / Thesis / Last couple sentences of introduction</td>
<td>Professional Scholarly (Original and secondary sources are usually best.)</td>
<td>Books, research journal articles, conference papers</td>
<td>Library catalog, library databases, Google Scholar</td>
</tr>
<tr>
<td>To convince your audience / Evidence / Body</td>
<td>Professional Scholarly (Original and secondary sources are usually best.)</td>
<td>Books, research journal articles, conference papers</td>
<td>Library catalog, library databases, Google Scholar</td>
</tr>
<tr>
<td>To report what others have said / Evidence / Body</td>
<td>Professional Scholarly</td>
<td>Any, including professional blogs and association websites and publications, research journal articles, conference papers</td>
<td>Google and Bing, library databases, Google Scholar</td>
</tr>
<tr>
<td>To describe the situation and why it's important / Introduction / Conclusion</td>
<td>Popular Professional</td>
<td>Any, including magazine articles, professional blogs, and association websites and publications</td>
<td>Google and Bing</td>
</tr>
</tbody>
</table>

Your plan for sources should include where to use them in your final product.

**EXAMPLE: Where to Use Your Sources in a Term Paper**

**Information need:** To answer your research question(s) (and present your
thesis statement)

**Use Sources:** Last couple of sentences of introduction

**Information Need:** To convince your audience that your answer is correct or, at least, the most reasonable answer.

**Use Sources:** Evidence / Body

**Information Need:** To report what others have said about your question, including any different answers to your research question.

**Use Sources:** Evidence / Body

**Information Need:** To describe the situation surrounding your research question for your audience and explain why it’s important.

**Use Sources:** Introduction / Conclusion
Professors want to see evidence of your own thinking in your essays and papers. Even so, it will be your thoughts in reaction to your sources.

- What parts of them do you agree with?
- What parts of them do you disagree with?
- Did they leave anything out?

It's wise to not only analyze—take apart for study—the sources, but also to try to combine your own ideas with ideas you found in class and in the sources.

Professors frequently expect you to interpret, make inferences, and otherwise synthesize—bring ideas together to make something new or to find a new way of looking at something old. (It might help to think of synthesis as the opposite of analysis.)
**ACTIVITY: Creative Thinking**

Synthesis is a creative act. Are there places, things, activities, or situations that you already use to spark your creativity? Sometimes even simple things can help us be more creative. Take a look at the article [5 Ways to Spark Your Creativity](#) for some tips.

The book *Thinker Toys*, by Michael Michalko, can help you expand your ability to think creatively. The [author’s web page](#) contains fun but challenging thinking exercises, including this one that lets you practice making associations between seemingly disparate concepts.

---

**Getting Better at Synthesis**

To get an A on essays and papers in many courses, such as literature and history, what you write in reaction to others’ work should use synthesis to create new meaning or show a deeper understanding of what you learned.

To do so, it helps to look for connections and patterns. One way to synthesize when writing an argument essay, paper, or other project is to look for themes among your sources. So try categorizing ideas by topic rather than by resource—making associations across sources.

Synthesis can seem difficult, particularly if you are used to analyzing others’ points but not used to making your own. Like most things, however, it gets easier as you get more experienced at it. So don’t be hard on yourself if it seems difficult at first.
EXAMPLE: Synthesis in an Argument

Imagine that you have to write an argument essay about Woody Allen’s 2011 movie *Midnight in Paris*. Your topic is “nostalgia,” and the movie is the only resource you can use.

In the movie, a successful young screenwriter named Gil is visiting Paris with his girlfriend and her parents, who are more politically conservative than he is. Inexplicably, every midnight he time-travels back to the 1920’s Paris, a time period he’s always found fascinating, especially because of the writers and painters—Hemingway, Fitzgerald, Picasso—that he’s now on a first-name basis with. Gil is enchanted and always wants to stay, but every morning, he’s back in real time—feeling out of sync with his girlfriend and her parents.

You’ve tried to come up with a narrower topic, but so far nothing seems right. Suddenly, you start paying more attention to the girlfriend’s parents’ dialogue about politics, which amount to such phrases as “we have to go back to...,” “it was a better time,” “Americans used to be able to...” and “the way it used to be.”

And then it clicks with you that the girlfriend’s parents are like Gil—longing for a different time, whether real or imagined. That kind of idea generation is synthesis.

You decide to write your essay to answer the research question: How is the motivation of Gil’s girlfriend’s parents similar to Gil’s? Your thesis becomes “Despite seeming to be not very much alike, Gil and the parents are similarly motivated, and Woody Allen meant *Midnight in Paris*’s message about nostalgia to be applied to all of them.”

Of course, you’ll have to try to convince your readers that your thesis is valid and you may or not be successful—but that’s true with all theses. And your professor will be glad to see the synthesis.
ACTIVITY: Balancing Sources and Synthesis

Here's a technique to quickly assess whether there is enough of your original thought in your essay or paper, as opposed to information from your sources: Highlight what you have included as quotes, paraphrases, and summaries from your sources. Next, highlight in another color what you have written yourself. Then take a look at the pages and decide whether there is enough you in them.

For the mocked-up pages below, assume that the yellow-highlighted lines were written by the writer and the pink-highlighted lines are quotes, paraphrases, and summaries she pulled from her sources. Which page most demonstrates the writer's own ideas? See the bottom of the page for the answer.

Mocked-up passages showing the division between quotes, paraphrases, and summaries and original ideas

ANSWER TO ACTIVITY: Balancing Sources and Synthesis

The answer to the “Balancing Sources and Synthesis” Activity above is:

Sample 2.

The yellow-highlighted sections in Sample 2 show more contributions from the author than from quotes, paraphrases, and summaries of other sources.
When to Quote, Paraphrase, or Summarize

To build everything but the research question, you will need to summarize, paraphrase, and/or directly quote your sources. But how should you choose what technique to use when?

**TIP: Citing Sources**

Remember to cite your sources when quoting, paraphrasing, and summarizing. See [How to Cite Sources](#) for details.

**Choose a direct quote** when it is more likely to be accurate than would summarizing or paraphrasing; when what you’re quoting is the text you’re analyzing; when a direct quote is more concise that a summary or paraphrase would be and conciseness matters; when the author is a particular authority whose exact words would lend credence to your argument; and when the author has used particularly effective language that is just too good to pass up.

**Choose to paraphrase or summarize** rather than to quote directly when the meaning is more important than the particular language the author used and you don’t need to use the author’s preeminent authority to bolster your argument at the moment.

**Choose to paraphrase instead of summarizing** when you need details and specificity. Paraphrasing lets you emphasize the ideas in resource materials that are most related to your term paper or essay instead of the exact language the
Choose to summarize instead of paraphrasing when you need to provide a brief overview of a larger text. Summaries let you condense the resource material to draw out particular points, omit unrelated or unimportant points, and simplify how the author conveyed his or her message.

ACTIVITY: Quote, Paraphrase, or Summarize?
Open activity in a web browser.

— Helping Others Follow —

As you switch from component to component in your paper, you’ll be making what are called rhetorical moves—taking subsequent steps to move your argument along and be persuasive. Your readers will probably know what you’re doing because the components in everyday oral argument are the same as in written argument. But why you’re switching between components of your argument, and with these particular sources, might be less clear.

NOTE:

The ideas and examples in this section are informed by Gerald Graff, Cathy Birkenstein, and Russel Durst, They Say/I Say with Readings (New York: WW Norton & Company, 2012).

You can help readers follow your argument by inserting phrases that signal why you’re doing what you’re doing. Here are some examples:
• “Many people have believed …, but I have a different opinion.”
  To state that what you’re saying in your thesis is in opposition to what others have said.
• “Now let’s take a look at the supporting research.”
  To move from a reason to a summary of a research study that supports it (evidence).
• “The point they make is…”
  To introduce a summary of a resource you’ve just mentioned.
• “At this point I should turn to an objection some are likely to be raising…”
  To acknowledge an objection you believe a reader could have.
• “But am I being realistic?”
  If the objection is that you’re not being realistic.
• “So in conclusion…”
  To move from the body of an essay to the conclusion.

Phrases like these can grease the skids of your argument in your readers’ minds, making it a lot easier for them to quickly get it instead of getting stuck on figuring out why you’re bringing something up at a particular point. You will have pulled them into an argument conversation.

**EXAMPLES: The Language of Arguments**

The blog that accompanies the book *They Say/I Say* with Readings, by Gerald Graff, Cathy Birkenstein, and Russel Durst, contains short, elegantly constructed contemporary arguments from a variety of publications. Take a look at the [They Say/I Say blog](https://www.dhlotr.com/they-say-i-say-blog) for a moment and read part of at least one of the readings to see how it can be helpful to you the next time you have to make a written argument.

The book *They Say/I Say* with Readings provides templates of actual language to be used in written arguments. This can be extremely helpful to beginning writers because it takes some of the mystery out of what to say and when to say it. For these templates, check the book out from your library.

**Additional Advice Sources**

Take a look at these sites for argument essay advice for students:

• **Argument Handout** - University of North Carolina Writing Center
• **Rewriting: how to do things with texts** - Utah State University Press (Project Muse affiliates only)
Copyright is the law. While digital technology has made some aspects of copyright more complex, knowing the basics can help you to use material legally and to protect your own creative works.

You create copyrighted works regularly. When you write something, record a song or video, or take a photograph you have created a work that is protected by copyright. It is important to know how to manage your rights as a creator.

Every day you work with copyrighted materials created by other people. Whenever you read a book, download a song, stream a video or play a video game, you are potentially dealing with copyrighted materials. It is important to understand what is and is not covered by copyright law.
Copyright Law

U.S. Copyright Law has its origin in the U.S. Constitution:

“... The Congress shall have the power ... to promote the Progress of Science and useful Arts, by securing for limited Times to Authors and Inventors the exclusive Right to their respective Writings and Discoveries.

- U.S. Constitution Article 1, Section 8

The U.S. Congress has the power to create laws that govern copyright. (Image Source: National Archives and Records Administration. Public Domain.)

The purpose of copyright is to encourage the creation and sharing of creative works. Copyright gives creators an incentive to produce and share new works by granting them exclusive rights to their work for a limited time. This provides an opportunity for a creator to benefit from his or her work.

Congress determines the limits of this monopoly, including the length of time that copyright coverage lasts. These limits can (and have) changed over time.
What Copyright Covers

The kinds of works covered by copyright are listed in Section 102 of the Copyright Act. In order for a work to be covered by copyright, it must be an original work of authorship fixed in a tangible medium of expression. (See the detailed explanations below.)

Copyright covers original work that is fixed in a tangible medium of expression.

There are several types of works that can be protected, including:

- literary works
- musical works, including any accompanying words
- dramatic works, including any accompanying music
- pantomimes and choreography
- pictorial, graphic, and sculptural works
- motion pictures and other audiovisual works
- sound recordings
- architectural works

In addition to these, new formats such as email, software, video games, and digital works including web pages and online images have all been determined to be covered by copyright protection.
**DEFINITION: Original Work of Authorship**

In copyright law, originality means that a work should have at least a minimum amount of creativity. For example, an alphabetized list of names and phone numbers would not receive copyright protection because it required no creativity to produce.

**DEFINITION: Tangible Medium of Expression**

For a work to be “fixed in a tangible medium,” it must exist in some perceptible format for more than a transitory duration. For example, a work that is fixed in a tangible medium could be written on paper, saved to a computer hard drive, or recorded on film. An improvised jazz performance that is not recorded would not have copyright protection, because the creative expression of the musician has not been saved in any tangible format.

---

**What ISN’T Covered by Copyright?**

Not all works are covered by copyright. Those not covered include:

**Works already in the public domain (discussed in detail later in this book)**

- *Moby Dick*
- Shakespeare’s plays
- Beethoven’s works

**Works not fixed in a tangible medium**

- A song in your head, but not recorded or written down

**Ideas**

- Boy meets girl, they fall in love and live happily ever after
- Hero protagonist saves the world with the help of wacky sidekick

**Facts**
• 1+1=2
• George IV died in 1830
• Copenhagen is the capital of Denmark

**Works of the U.S. Government produced by government employees**

• Federal government reports
• Acts/Bills of Congress
• [www.whitehouse.gov](http://www.whitehouse.gov)

---

**Copyright in Cases of a Work Made for Hire**

If you create something as part of your job duties, it is likely a work made for hire. In these cases, the employer is considered the author and rights holder of a work made for hire rather than the employee.

Read the United States Copyright Office’s [Works Made for Hire](http://www.copyright.gov/) circular for a more nuanced discussion.

---

**ACTIVITY: Copyrightable?**

[Open activity in a web browser](http://www.copyright.gov/)

---

**Rights Granted by Copyright**

So, now that you know what kinds of works are covered by copyright, what exactly are the rights granted to a copyright holder?

Five exclusive rights are granted to the creator of a copyrighted work. We call these the Author’s Bundle of Rights. This means the copyright holder is the only person who has the right to do these things and has the authority to grant permission for others to do these things.

If you are not the copyright holder and want to do any of the activities on the right, you may need to get permission to do so from the holder of the copyright.
AUTHOR’S BUNDLE OF RIGHTS

To Reproduce

• Making physical and digital copies

To Prepare Derivative Works

• Creating foreign language translations, movie adaptation of a book, etc.

To Distribute

• Sharing over Peer-to-Peer networks or posting online, as well as distributing physical copies

To Display Publicly

• Displaying in a gallery, putting posters on a noticeboard, etc.
• To Perform Publicly (for literary, musical, dramatic and other audiovisual works)

Performing a play, showing a movie, broadcasting on TV, reading aloud from a book, etc.

• To Perform Publicly (for sound recordings, to perform by means of digital audio transmission)
• Playing recorded music in clubs, restaurants, stores, on the radio, etc.

ACTIVITY: Author Rights

Open activity in a web browser.
When Does Copyright Apply?

Under current U.S. law, copyright applies as soon as a work is fixed in a tangible medium of expression. This means that when you save a file, take a photograph, record a song, or paint a picture your work has copyright protection.

As the creator, provided that the work is not a work made for hire, you are the owner of the copyright on your work. You do not have to register the work with the U.S. Copyright Office, publish it, or put a copyright notice on it.

If you wish to give away, sell or license any or all of the copyright on your work, you have the right to do so.

If you give away or sell your exclusive copyright to someone else, you no longer have the rights mentioned above and need to treat the work the same as any other copyrighted work created by someone else.

See Public Domain and Term of Copyright later in this section for details about the duration of copyright.

Respecting Copyright

While working with other people’s copyrighted works, remember that their works are under copyright protection from the moment of creation.

Additionally, U.S. Copyright Law applies to works found on the Internet. Many of the works you find online are protected by copyright, even if there is no copyright notice. The availability of and the ability to access copyrighted materials on the Internet does not mean that those works are in the public domain, and thus free to use, reuse and distribute in any manner you wish. It is important to respect copyright, whether the works are in a physical or digital format.

Risks of Infringing Copyright

If you infringe upon one or more of the exclusive rights, the copyright owner can bring a claim against you for copyright infringement. There are a few different penalties that are possible if you are accused of copyright infringement:

- Under specific circumstances, U.S. copyright law allows criminal prosecution in cases of willful infringement.
• If the infringing work is online, such as a video posted to YouTube, the copyright owner can send a takedown notice. The material will be taken down and you will be notified of the accusation of infringement. If you believe that your use of the material is legal, you can respond with your explanation of why. Some Internet Service Providers will cut off your access if you receive too many takedown notices.

• The copyright owner can sue you. They could ask for an injunction to stop your use of their work. They can also ask for either actual damages or statutory damages. Actual damages are the actual amount of money the copyright owner lost due to your activity plus any profit you made from using the work. These can be hard to determine, so the law also allows for statutory damages. These are a set range, from $750 to $30,000 per infringed work, that the judge or jury awards to the rights holder if you are found guilty. These damages can increase to $150,000 per infringed work if your use is determined to be “willful” infringement.

• Some rights holders will offer the option of settling out of court for a few thousand dollars. This is cheaper than the cost of a trial for the rights holder and you.

The accusation of infringement is not the same as a conviction. You always have the right to defend your use.

——— Exceptions to Copyright ————

U.S. Copyright Law includes exceptions that limit the rights of the copyright holder. These exceptions allow for certain uses of copyrighted material without seeking permission. Congress created these exceptions in order to balance the rights of creators and users and to enable some socially beneficial uses of copyrighted works.

Some of these exceptions are explained below.

**Fair Use**

Fair Use (Sec. 107) allows for various uses of copyrighted works. This is the most flexible of the exceptions in the copyright law and can apply in a wide variety of situations.

To learn more check out our section on Fair Use.
Reproduction for Libraries

Section 108 of the Copyright Act allows libraries and archives to make copies of copyrighted works under very specific conditions. For example, a patron can ask the library to make a copy of a journal article or portion of a book in the library’s collection as long as it is for the patron’s personal study.

First Sale Doctrine

The first sale doctrine (Sec. 109) allows you to distribute a legally acquired physical copy of a copyrighted work. This allows libraries to lend books and individuals to lend or sell used books, movies or CDs.

Classroom Display or Performance

Under Section 110(1) it is okay to display or perform copyrighted works in a face-to-face classroom setting at a non-profit educational institution. This allows a teacher to show a video or students to create and display multimedia projects in class. Section 110(2) allows for the display or performance of copyrighted works for distance learning (e.g. on a course management system), but you must fulfill many specific requirements in order to qualify for this exception.

Creative Commons - An Alternative

The internet has made the creation and sharing of creative works much easier than it has ever been. Most of these new works are protected by copyright as soon as they are created. But not everyone wants to lock up their creativity behind the protection of copyright. Many people want their work to be freely shared and even built upon.

Creative Commons (CC) was developed out of the desire to make it easier to share and use copyrighted works. Creative Commons allows a creator to grant licenses to their work that could include the ability to share, adapt and/or use material for commercial purposes without having to ask for permission. The creators still own the copyright, but they proactively decide to let others use their works under certain conditions.
Creative Commons allows a creator to grant licenses to their work without requiring they grant individual permission.

**MOVIE: Get Creative**

The origin and adventures of the creative commons licensing project.

[View video](#)

**ACTIVITY: Finding Creative Commons Works**

Many websites include CC licensed works. You can search them to find materials that you can freely use in creating your own work provided that you comply with the terms of the license. You can also upload your own CC licensed works to share with others.

Examples include:

- [Flickr](#)
- [YouTube](#)
Copyright protection of a work doesn’t last forever. Once the copyright term ends for a work, it enters the public domain. This means that no one owns the rights to the work anymore, so the work may be used by anyone, for any purpose, without permission. The public domain includes works where copyright has expired and works that were never protected by copyright in the first place (such as works of the U.S. federal government created by federal employees).

The public domain includes works where copyright has expired and works that were never protected by copyright.

**ACTIVITY: Finding Works in the Public Domain**

The public domain provides a great source of materials that you can use for
any purpose, without requesting permission or paying a fee. The internet is full of useful sites that can help you find Public Domain materials, including:

- Columbia University list of Public Domain Sources
- HathiTrust
- Internet Archive
- Project Gutenberg

When Does a Work Enter The Public Domain?

Due to U.S. participation in international treaties and changes to U.S. copyright law, Congress has placed a limitation on the length of copyright so that works can eventually become part of the public domain and be re-used and built upon by others. Over the years the term of copyright has changed significantly.

The current term is:

- 70 years after death of author. If there are multiple authors, then it is 70 years after the death of the last author.
- If corporate, or anonymous, authorship the term is either 95 years from date of first publication, or 120 years from the date of creation, whichever comes first.

Term of Copyright

Since the duration of copyright has changed throughout the years, it can be difficult to determine when copyright expires for a particular work. Below are links to a couple of online sources to help you determine when a particular work enters the public domain.

- Copyright Term and the Public Domain in the United States
- ALA Copyright Genie

EXAMPLES: Copyright Duration

The duration of copyright depends on when the work was created and whether
it was the work of a single author, multiple authors, or an anonymous or corporate author.

Copyright terms are based on factors such as the date of death of the author and on what laws were in effect when a work was created.

- **A Brief History of Rabbits in Literature** by Aaron Figgleson (1918-2002): Copyright ends 2072 – 70 years after the author’s death
- **Quarks: A Definitive Guide** by Joseph P. Wickes (1952-2012), Raylene O. Fine (1936-2008), and Otis M. Wellborn (1919-2000): Copyright ends 2082 – 70 years after the death of the last author to die
- **Whose Poo Is This? A Guide to Animal Droppings** by Acme Animal Industries (published 2002) – Created internally 1969: Copyright ends 2089 – 120 years from the date of creation
- **Advice for Parents: Good Tips from Parents** by Acme Animal Industries (published 2011) – Created in blogs 2008-2011: Copyright ends 2106 – 95 years from the date of first publication
What Is Fair Use?

Fair Use is an exception to U.S. copyright law that allows use of copyrighted work under certain conditions.

Are you incorporating any materials in your research final product that were created by someone else, such as images or text from other works? These materials could be protected by copyright. For example, content you find online, text, books, movies, songs, email, images, and videos are most likely copyrighted. Fortunately, U.S. copyright law includes an exception that allows you to use copyrighted work in your assignments for class.

However, if you would like to share your research product outside of the classroom (such as on a webpage or blog or in your portfolio), you will need permission from the copyright owner(s) unless your use is covered under another statutory exception. Fair use is one such exception, and it can apply to a wide variety of uses.
NOTE: Fair Use and Educational Use

Fair Use plays an important role in education. Although educational use receives several protections in copyright law, not all educational use is automatically fair use. It’s important to know that there are limits to how you can use others’ creative works even as a student or teacher in the classroom.

In this section, you will learn about fair use and strategies to help determine whether or not a proposed use of someone else’s copyrighted works falls under the fair use exception. Understanding how to properly perform a fair use analysis and assert your fair use rights can help you to build upon others’ works with confidence.

Fair Use and Copyright - A Balance

Copyright in the U.S. is intended to promote the creation of new works by providing an incentive for creators. However, recognizing that new works often build on or incorporate existing works, the law strikes a balance between the rights of creators and the rights of users via exceptions to the exclusive rights of the creator.

The fair use exception is detailed in Section 107 of the U.S. Copyright Act. Unlike other copyright exceptions, fair use is flexible and can apply to a broad array of uses. It is designed to be adaptable to new uses and technologies so that Congress doesn’t have to create new exceptions before a new technology can be utilized.

MOVIE: What Is Fair Use?

Watch a short introduction to fair use from the OSU Libraries’ Copyright Resources Center.

View video
The Four Factors

Most of the copyright exceptions are very specific about what kinds of uses may qualify for the exception and often include various restrictions about who can use the exception and under what precise conditions.

Fair use, on the other hand, is much more flexible and can apply to a wide variety of uses. Instead of specifying an exact type of user, type of material or amount that qualifies for this exception, the fair use statute provides a framework for the analysis and application of four factors that determine whether or not a particular use may qualify as fair use.

The four factors of fair use are:

• Purpose & character of use, including whether commercial (i.e. publishing a book) or non-commercial (i.e. using in a classroom assignment)
• Nature of the original material (i.e., is the work published or unpublished? Fact or fiction? Highly creative?)
• Amount and substantiality of the original work (are you using the entire work or just a portion?)
• Effect on the marketplace or on the work’s value (will your use have a financial impact on the creator?)

When considering whether a proposed use of a copyrighted work may qualify as fair use, you must weigh all four factors together. Each factor is equally important.

Transformation

The courts have recently emphasized the concept of transformation or a transformative purpose, which falls under the first factor of fair use.

Transformation means that the way in which the work is being used is significantly different than the original use for which it was created.

In many cases a transformative use of a copyrighted work will strongly favor a determination of fair use.

There are two ways in which a use can be transformative.

First, you could actually make changes to the original work in order to use it for a
new purpose. An example would be to take short clips of popular movies and remix them to create a video for the purpose of social commentary or teaching.

The second form of transformative use does not require that you alter the original work in any way. Instead, you simply use the work for a purpose that is significantly different than the use for which it was created. An example of this would be using clips from a blockbuster movie that was originally sold for mass market entertainment for the purpose of teaching and research.

--- Remix Culture ---

See examples of remixing that fall under fair use.

View video

--- Evaluating Your Case for Fair Use ---

Copyright law lacks specificity, so it can be difficult to determine whether or not a particular use may qualify as fair use. Fortunately, there are a number of useful tools available online to help you consider the four fair use factors as they apply to your intended use.

A Fair Use Checklist can be very helpful for conducting a fair use analysis. The checklist indicates various criteria for each factor which have been found in a court of law to favor or oppose a finding of fair use. It is highly recommended that you use a fair use checklist to evaluate the strength of your argument for fair use.

--- Follow the Four Factors of Fair Use ---

Watch this video to see a fair use analysis using a fair use checklist.

View video

In a fair use analysis, you consider each of the four factors in light of your proposed use and determine whether your use is favoring or opposing fair use for that factor.

You then weigh all four factors together. You cannot rely on a numerical tallying of
criteria in favor and opposing fair use in order to make a determination. You must consider all four factors holistically and determine if, taken as a whole, they favor or oppose fair use, and to what extent (e.g. strongly favoring fair use, slightly favoring, etc.).

- If, overall, your use favors fair use, then you may proceed.
- If your use instead opposes fair use, you should reassess your use and determine if you can make any changes that could strengthen your case for fair use.

There are other tools in addition to the checklist that can help you conduct a fair use analysis. The American Library Association has developed a tool called the Fair Use Evaluator.

**ACTIVITY: Fair Use Criteria**

Visit the Fair Use Checklist and review the criteria for each of the four factors.

**ACTIVITY: Fair Use or Not Fair Use?**

Open activity in a web browser.

---

**Tips for Best Practice**

While it is important to perform a fair use evaluation for each and every use of copyrighted material, there are some general rules that can often help you to strengthen a fair use claim.

Below are a few tips to consider when relying on the fair use exception in order to use copyrighted works in your endeavors.

- **Use only lawfully acquired copyrighted works** – To be able to claim fair use you must have used a legal copy of the original work.
- **Acknowledge all of your sources with a bibliographic citation** – Giving proper credit to the original creator demonstrates good faith and may help strengthen your fair use case.
- **Use only the amount of the original work that you need to accomplish your goal** – Since the amount of the original work that is used
is one of the fair use factors, it is always important to only use what you need and not add extra material.

- **Restrict the audience and/or make only the number of copies that you need** - The less you copy and share the parts of the original work, the less effect you have on the market for it.

- **Use Creative Commons licensed or public domain works** - If you use works that expressly allow you to use them or have no copyright protection, you do not need to rely on fair use and can be more confident that your use is legal.

- **Use works that you created** - If you created it, you own the copyright, with the exception of works made for hire. (When you create things for your job, typically your employer owns the copyright.)

If you are in doubt about your fair use claim, either reassess and make changes to your proposed use in order to make a stronger claim or ask for permission to use the copyrighted material – It is much easier to make changes or ask for permission before you use copyrighted material than to get hit with an infringement claim and have to make changes or face a law suit after your use.

---

**Further Reading on Fair Use**

A number of groups have developed Codes of Best Practices in Fair Use for different types of activities. These codes propose examples of fair use within specific communities of practice. Below are links to some of these Codes of Best Practices.

- [Code of Best Practices in Fair Use for Online Video](#)
- [Code of Best Practices in Fair Use for Poetry](#)
- [Code of Best Practices in Fair Use for OpenCourseWare](#)
- [Documentary Filmmakers’ Statement of Best Practices in Fair Use](#)
- [Association of Research Libraries Codes of Best Practices in Fair Use for Academic and Research Libraries](#)

### Common Examples of Fair Use

Students and teachers rely on fair use in order to accomplish many of their educational goals. Below are some, but by no means all, educational activities that rely upon fair use.
**Student Projects**

Includes both media and text.

Your fair use analysis will change depending on how the project is presented, i.e. only the professor sees it, you present it to the whole class, you present it to a group outside of the class, or you post it online for anyone to see.

**Course Reserves**

Includes electronic reserves.

Instructors may copy or post small portions of books or journals for supplementary student readings, but cannot copy entire copyrighted works as a replacement for materials that students would normally be required to purchase.

**Sound or Video Clips for Teaching**

Students and teachers can make use of video or sound clips in creating multi-media presentations for use in the classroom.

**Digitization Projects**

Many university libraries rely on fair use in order to create large scale digitization projects that preserve older materials, as well as providing improved access to their collections for the purpose of research. For an example of this type of digitization project check out the [HathiTrust Digital Library](https://www.hathitrust.org).

**Content in Scholarly Articles**

It is common to quote other researchers’ writings or use others’ images, graphs or charts in your own scholarly writing. These practices have long been considered acceptable under fair use.
Access for the Disabled

When specific exemptions don’t fit.

While there are specific exceptions that allow for making copies of copyrighted works in order to provide access to the visually handicapped, they are sometimes too narrow to provide complete access. In these cases it is possible to rely upon fair use in order to provide access to materials.

Fair Use for Non-Educational Purposes

Fair use is not only available for educational purposes. Many other commercial and non-commercial activities depend upon fair use. Some of these common fair uses include:

- Quotes in books, news reports and blogs
- Mash-ups and remixes
- Parody, such as on television shows like South Park or Saturday Night Live
- Video or sound clips in documentary films
- Thumbnail images on search engines

Myths about Fair Use

Many people have heard of fair use and have some ideas about what it is. Unfortunately, there are many myths or misunderstandings about exactly what fair use covers, what the law states or how it can be applied. Below we dispel just a few of the most common myths about fair use.

Myth 1: All educational use is fair use.
Fact: While many educational uses are considered fair use, there are some activities that do not meet the fair use criteria. For example, a teacher can’t make copies of an entire text book so that students don’t have to buy it.

Myth 2: Every educational use is transformative.

Fact: Using copyrighted works for teaching can often be a transformative use, but not always. For example, using a text book created to teach Biology 101 to teach Biology 101 is not transformative.

Myth 3: All socially beneficial use is fair use.

Fact: Fair use is designed to help balance the rights of the creator and the social benefit of using copyrighted works in certain ways. Not all uses of copyrighted works that would be socially beneficial, however, qualify as fair use. For example, scanning and posting an entire medical text book online for anyone to access for free is socially beneficial but probably not fair use.

Myth 4: All commercial use precludes fair use.

Fact: Many commercial activities, such as newspapers and online news sites, rely heavily on fair use.

Myth 5: It is not possible to have a fair use when a permissions scheme exists for a work.

Fact: Just because rights holders are willing to charge you to use their copyrighted material, does not mean that fair use cannot apply. For example, the Associated Press created a licensing scheme to quote from AP stories but quoting from news stories has long been considered fair use.

Myth 6: Fair use specifies a percentage or amount of a work that is okay to use.
**Fact:** The law does not state that using 10% of a book or 30 seconds of a song or video clip is fair use. You can often use more than these arbitrary limits, while sometimes using even less might not be fair use. The amount of the original work used is only one of the four factors to consider.
13-Roles of Research Sources

Thinking About Roles of Sources

Scholarly writers use sources to fill specific roles and make a persuasive argument.

Does this nightmare sound like how you feel every time you have to write a term paper?

Your team is playing in the big game and you’re the coach. (Maybe the real coach missed the plane. Who knows—it’s a nightmare!) The stakes are high. You know your players are good athletes—you have access to the best and plenty of them. But you don’t really know good strategies of the game, so you don’t quite know how to use your players. For instance, is it better to keep your quarterback fresh by substituting often? Your kicker is not as bulky as your tackles. Is that typical of good kickers or should you find somebody else? And what about your linemen—can they tackle as well as block?

What makes this a nightmare is not knowing how to use your players in a high-pressure game. Unfortunately, that situation is similar to writing a term paper if all you know are directions like these:
Your paper must be in 12 pt. font, Times New Roman, double spaced with no more than 1” margins, and include a minimum of 8 total articles comprised of:

- At least 2 peer-review articles
- 3 (no more than 6) popular articles (magazine or newspaper)
- 2 (no more than 4) electronic sources (website or blog)

So you know you need sources. But directions like those aren’t much help with what to actually do with the sources in your paper. Even with credible sources, it’s very difficult to write a persuasive paper until you learn the roles that sources play—how you can use them—within your paper.

But who said anything about a persuasive paper? Perhaps one of the things you don’t know is that with most term papers and essays, the unstated expectation is that you will use your sources to make an argument. That’s because most scholarly writing makes an argument. (You will be arguing that your thesis is correct.)

Obviously, it’s high time someone helped you learn all this!

For both professionals and student researchers, successful scholarly writing uses sources to fill various roles within the term paper, journal article, book, poster, essay, or other assignment.

Those roles all have to do with rhetoric—the art of making a convincing argument. Putting your sources to work for you in these roles can help you write in a more powerful, persuasive way—to, in fact, win your argument.
Knowing how to use your “players” effectively improves the outcome. (Image source: Scott Stuart)

**TIP:**

For another way to think about choosing the right sources for your needs, see Sources and Information Needs.

**Note:**

This section on rhetorical roles of research sources was influenced by many sources. See the bibliography.

--- **BEAM—A Solution That Might Shine** ---

This table, created from the ideas developed by Joseph Bizup, describes the roles
that sources can play (some of the ways they can be used) in your finished assignment, such as a term paper. Bizup called his model BEAM, an acronym that stands for background, exhibits (or evidence), argument, and method.
<table>
<thead>
<tr>
<th>Role for Sources</th>
<th>How to Use Them</th>
<th>Kinds of Sources That Can Have That Role*</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Background</strong></td>
<td>Writers rely on these sources for general factual information. For instance, a writer could use background information to introduce a setting, situation, or problem in the term paper.</td>
<td>Usually secondary sources and tertiary sources, but, basically, just anything other than journal articles that report original research. Some examples: literature review articles, non-fiction books, and biographies (secondary) and field guides and Wikipedia (tertiary).</td>
</tr>
<tr>
<td><strong>Exhibits or Evidence</strong></td>
<td>Writers interpret and analyze sources like these in the same way they are used as exhibits and evidence in a museum or a court.</td>
<td>Usually primary sources. Some examples: newspaper articles from the time in question, works of literature or art, and research articles.</td>
</tr>
<tr>
<td><strong>Argument</strong></td>
<td>Writers engage with these sources that they agree with or disagree with. The sources are usually written by scholars in their field. For instance, writers often include sources that describe earlier work that is specifically relevant to their own research question and their thesis (what they consider to be the answer to that question.)</td>
<td>Usually primary and secondary sources. Some examples of primary sources: research articles in the sciences and humanities and recordings of performances in the arts. Some examples of secondary sources: commentaries and criticisms, such as those that appear in literature reviews, textbooks, and blogs that comment on research.</td>
</tr>
<tr>
<td><strong>Method or Theory</strong></td>
<td>Writers follow the key terms, concepts, or manner of working that are explained in these sources. That is, they pay attention to and use the relevant work of others before them to carry out their own</td>
<td>Often secondary sources. Some examples: literature reviews, textbooks, and blogs that comment on research.</td>
</tr>
</tbody>
</table>
Using sources to function in these roles is how you enter into the scholarly conversation with all the other research and writing that has covered your topic before.

In the next few pages, you’ll learn more about each role by analyzing how sources are used in the pop culture essay cited in the Example below. Seeing how the essay’s author puts his sources to work in their various roles should help you envision how you can do the same in your own papers. The essay discusses how pop culture affects American (and global) values.

EXAMPLE: Manufacturing Taste

Click on the citation below to skim through the essay. When you are finished, come back to this page and begin the next section on background sources.

BEAM: Background Sources

These are sources that should be noncontroversial—the author accepts information from these sources as being authoritative (and expects readers to as well). In other words, the sources (and the information gleaned from them) are generally trusted or undisputed. That information can serve as the incontestable foundation for your claims.

Background information is common knowledge (e.g. the sky is blue) and not necessary to be cited.

It’s recommended that you cite background sources when you’re unsure, but one rule of thumb suggests finding the same undocumented information in at least 5 other credible sources. It can be difficult to make this determination, so it’s always a good idea to consult your professor.

Let’s look at a statement in the first paragraph of the pop culture essay:

“Thus, the corporate giants of the American Culture Industry (themselves now mostly multinational conglomerates) clearly must pay attention to the demands of audiences around the world in formulating, producing, and promoting the specific films, television, music, and other artifacts that are the stuff of popular culture.”

How do you know that the “corporate giants are .mostly multinational conglomerates” as stated in the first sentence? Or that the items listed are indeed the stuff of popular culture? These are examples of common knowledge.

Looking a little deeper...

Without context, this paragraph could also be the conclusion of a paper about what corporations should do (demonstrating the ongoing nature of knowledge itself). But the paper is not about making recommendations to the American Cultural Industry. This is an assertion that the author uses to help set up his different argument and is meant to be taken at face-value. So it’s an example of how the same source can play different roles in different written assignments—all depending on how writers use them.

There is more about background sources at Getting Background Reading.
ACTIVITY: Background Sources

Which of the following would be the best example of a background source that doesn’t need to be cited, according to the BEAM framework?

“There were a total of 39 delegates who signed the U.S. Constitution; William Jackson was the 40th, but served as secretary and did not represent a state.

“Thought to be limited to bat populations, the fungi responsible for the fast-spreading disease known as White-nose syndrome has been linked with similar infections affecting amphibians.

“Having published over 300 reports since 2000, the Pew Internet & American Life Project has been a trusted source for research into online behavior.”

Our Answer: “There were a total of 39 delegates who signed the U.S. Constitution; William Jackson was the 40th, but served as secretary and did not represent a state.

BEAM: Exhibit and Evidence Sources

Generally, exhibit and evidence sources are works of literature (or other media), collected data, or some observed phenomenon, etc. that you have been asked to write about. They are what you analyze or interpret.

Looking again at the pop culture essay, the exhibits being examined are pop culture and American (as well as global) values. Specifically, the essay is examining the relationship between the two:
On the other hand, the international success of Toy Story 3, a film that deals with anthropomorphized toys and is thus essentially a consumerist fantasy of commodities come to life, also suggests that global distribution of the products of the American Culture Industry is beginning to have an impact on the tastes and values of audiences even outside the United States.

Exhibit sources are not limited to examples in the humanities; they could also be data that was collected in a scientific experiment or by a website’s user survey. They can also simply serve as examples that help support a claim.

**BEAM: Argument Sources**

Argument sources provide you with the other voices in the academic conversation about your topic. Who else has done similar research, and how should your paper respond to what they’ve said? Does your paper refine or extend an existing hypothesis someone else has tested? If so, those sources belong in your paper.

Sometimes the purpose of including an argument source is to disagree with it and definitively indicate a different direction.

From our pop culture essay example:

> Althusser’s work remains compelling, despite the fact that theorists such as Michel de Certeau and John Fiske have argued that individuals actually have a considerable ability to resist and oppose the messages conveyed to them by official ideology, in popular culture and elsewhere.

The author is taking part and taking a stand in the ongoing scholarly discussion of culture, although this endorsement of Althusser’s work could possibly be considered a method source if the argument in the article went in a different direction.

**ACTIVITY: Argument Sources**

Which of the follow best defines an argument source in the BEAM framework?
• It’s one piece of research or scholarship that your paper is directly responding to.
• It’s one of many voices in a larger conversation that your research paper participates in.
• It’s one of several articles whose authors disagree with the premises of your paper.

**Our Answer:** It’s one of many voices in a larger conversation that your research paper participates in.

---

**BEAM: Method Sources**

While argument sources help you frame your paper within the larger scholarly discussion about your topic and exhibits provide a focal point, method sources help provide underlying and sometimes implicit assumptions for your argument or analysis.

For some research, these are literally the methods you use to collect data like a focus group or particular statistical analysis and provide justification for it. In other research, your paper might reveal a leaning toward a major attitude or school of thought within a discipline.

As a persuasive piece of writing, the essay has this intrinsic thread of caution and warning that is summed up in its conclusion:

“The children’s film industry might not be quite as sinister as the tobacco industry, with its efforts to addict children to cigarettes. [...] Meanwhile, the lives of those audiences are now being increasingly saturated by popular culture, making it more and more difficult for individuals to form attitudes, opinions, and values that are independent of the messages promulgated by the Culture Industry.”

While this is a subtle example, you would generally cite or at least credit your methods and theories that frame your analysis in your bibliography.
—— Practice with BEAM ——

You’ve just learned about the various roles sources can play in written material. In this section you’ll gain practice identifying roles that other writers have used them for and then be asked to examine your own past work.

ACTIVITY: A Reading Exercise

Read the abstract and passages below and identify the most likely role (background, exhibit, argument, or method) each featured source is playing in Lesy’s article. See our take on each below:

ABSTRACT: The article reports on visual literacy and the psychological aspects of photography. The author offers his opinions on the complexities of photographs and reports on the various levels of meaning behind picture taking. Particular attention is given to the psychological aspects of photography and photographers. Additional article topics include the importance of historical photographs, the impact of the Internet and digital media on the profession, as well as the importance of preserving photographs.

Passage 1

Solving one scholarly problem – the need to sort out an image’s multiple meanings – opens a clear view of others. No matter how mundane, utilitarian, or circumscribed a photograph’s origins may be, an image is not a sentence. Images are forms of sensory data, processed by the right brain. No matter how judicious and objective a historian fancies herself, a photograph will elicit projections and associations in her, stir her imagination, before she even notices what is happening to her. A photograph “is a function, an experience, not a thing,” said Minor White, a mid-
twentieth-century photographer whom Walt Whitman would have recognized as a fellow poet. “Cameras are far more impartial than their owners and employers,” White went on to say. “Projection and empathy [are] natural attributes in man...the photograph invariably functions as a mirror of at least some part of the viewer.” SOURCE CITED: Minor White, “Equivalence: The Perennial Trend,” PSA Journal, 29 July 1963), 17. 20.

Passage 2

The problem is not that there are too few images, but too many. Historical photographs exist in huge numbers, in well-ordered collections, presided over by knowledgeable curators. More and more of the collections are being digitized. Overload and saturation are only a mouse click away.

One example: in the Prints and Photographs Division of the Library of Congress there are 164,000 black-and-white photographs made between 1935 and 1945 by photographers employed by the Farm Security Administration and the Office of War Information.

Our Answer:
The source referred to in Passage 1 is probably a background source. The author is offering Whites definition as fact. It helps support one of the author’s assertions about the nature of photographs.

This source is an exhibit source. The author is using the Library of Congress’s photographic archive as a self-evident example to support the claim that information overload is a potential problem. The source referred to in Passage 2 is an exhibit source. The author is using the Library of Congress’s photographic
archive as a self-evident example to support the claim that information overload is a potential problem.

Now you’re ready to do role identification in a term paper you’ve already written yourself. (In the future, it may be helpful to do the same as a last check on term papers you are about to turn in.)

**ACTIVITY: Self-Check**

Directions: Re-read your term paper. (If you’ve already gotten feedback from your professor on this paper, also look to see whether any of that feedback applies to the roles you gave your sources.) Then consider the questions below. If you can’t answer “Yes” to every question, reconsider how you have used the sources in your paper.

**Do My Sources Have the Right Roles?**

- Have I used background information to, for instance, introduce a setting, situation, or problem in the paper or essay?
- Did I cite/not cite the background information appropriately?
- Did I avoid using journal articles that report original research for my background information?
- Did I interpret and analyze sources as though they are exhibits or evidence in my argument?
- Were primary sources those that played the role of exhibits and evidence?
- Did I discuss and cite what others have written about my research question?
- Did I include writers who both agree and disagree with what I say is my answer to the research question?
- Did I avoid using tertiary sources to make my argument that my thesis is reasonable?
- Did I make it clear where key terms, concepts, and manner of working that I used in my research were used first by others?
- Were my sources for useful key terms, concepts, and manner of working secondary sources?
Where to Go From Here

Now that you have a better understanding of how sources are used in a paper, check out Academic Argument, which can help you plan and structure your term paper.

If you’re interested in further integrating sources into your paper more effectively, check out this OSU Writing Center tutorial on summarizing, paraphrasing and quoting.
